

2018

Since 2005, both multiSUB horizontal and omniPAGE vertical gel chambers have been the cornerstone of the Cleaver Scientific EZEE electrophoresis range. Over this time, the entire range has gained an enviable reputation for innovation, ease of use, strength and long life. Nowadays, EZEE gel chambers can be found in leading research, teaching laboratories and in hospitals.

A complete range of Gel Electrophoresis systems and accessories from gel preparation to documentation and analysis. UK designed and manufactured for unrivalled quality.

CNC & laser cutting for precision manufacturing and assembly

Custom & bespoke product development and fabrication

Applications laboratory for product development and customer support

**UK designed** and manufactured

All Cleaver Scientific products, including the flagship gel electrophoresis systems, are supplied directly from its manufacturing facility in Rugby, based in the heart of the United Kingdom.

With the objective of simplifying the life of Life Science researchers, each product is the result of the combined creativity, technical and engineering expertise acquired over many years by the company's in-house manufacturing and scientific product development team. Cleaver Scientific prides itself on exceptional quality of its products offered at affordable prices.

Quality may be a much misused word, but at Cleaver Scientific it defines what we do, by the timely manufacture and supply of products to our customers that not only fulfil their purpose, but will remain durable and free of imperfections for many years to come, to the high quality of after sale support. Accreditation to ISO9001/2015 quality management system and adherence to this standard ensures that these principles are met consistently. Safety is of paramount importance and all the products we supply are CE compliant.

Being an original manufacturing company, custom-designed equipment can be made to order to accommodate researcher requirements. Please inquire for further information and availability.

ISO9001:15 17533/A/0001/UK/En

# Product Focus

multisub Horizontal and omnipage Vertical

Workhorse electrophoresis systems with extreme reliability and life-span for every Life Science lab

### SAFE series

Our Safe series of products focuses on improving lab safety by removing potential dangers such as Ethidium Bromide and UV light from the lab. Using safe Blue light and non-carcinogenic stains, research safety is enhanced without sacrificing results.

Power supplies

A wide range of voltage and current capabilities for a variety of applications.

# Cleaver Scientific's multiSUB horizontal gel electrophoresis units have been designed by scientists with the laboratory environment in mind.

**multisUB Horizontal Electrophoresis** tanks provide an easy to use and flexible platform for all your horizontal electrophoresis requirements. With a wide range of tank and tray sizes as well as many comb options, these systems can handle all manner of electrophoresis experiments.

High quality injection moulded construction and durable leakproof design for complete safety and long life.

**Electrical safety** – lid removal immediately disconnects power to the lower buffer chamber to allow entirely safe access to the gel.

Easy-click lid removal – asymmetric lid design and thumb locators on colour-coded cassette-style electrodes ensure that electrophoresis is always performed in the correct polar direction – i.e. negative to positive.

TANK AND LID DESIGN

'Plug-and-Go' casting – moulded casting dams clip easily onto the ends of the gel tray for rapid external casting, allowing the multiSUB™ unit to remain in use for gel running. Casting is as simple as 1, 2, 3... place one dam onto the lab bench facing upwards and insert the tray into the groove in the dam and repeat with the second dam at the other end. The tray is now sealed and may be placed on flat bench space or gel levelling table in readiness for leak proof gel-casting.

The widest range of combs available of any gel tank manufacturer - fit virtually every application from preparatory electrophoresis to high-throughput screening.

Available in **four thicknesses** and **colour-coded**. Range from:

- White 1mm supplied as standard
- Black 0.75mm for tightly resolved bands
- Red 1.5mm to maximise sample volume
- Blue 2mm to maximise sample volume

Black and white combs recommended for high resolution gels and publication quality data; red and blue to scale-up nucleic acid volumes for preparatory techniques.

COMBS

**Flexicasters** – allow agarose gels of different lengths to be cast in one unit. All models feature adjustable barriers with ultra-soft silicone gasket to ensure leak-proof casting.

**Gel levelling table** – recommended especially for MSMAXI or MSSCREEN gel trays. Adjustable levelling feet used in conjunction with a levelling bubble provide an even surface upon which to pour wide- and large format gels, to ensure consistent and uniform migration

**Multiple gel tray options** – eliminate the need for additional gel tanks and allow gels to be cast externally,keeping the tank permanently in use for electrophoresis if required.

UV and blue light transparent above 300nm.

Cassette-style electrodes – difficult to break, but inexpensive and easy to change – composed of 99.99% corrosion-resistant, pure platinum.

Power cables – with 4mm connectors compatible with most modern low-to-medium voltage power supplies; CE compliant. Adaptors available for complete power supply compatibility.

**Buffer Saver Blocks** – conserve buffer for added economy – especially beneficial in larger format MSMAXI and MSSCREEN units.

# Horizontal Gel Systems SELECTION GUIDE

				- :	
	MSMINI	MSMIDI	MSCHOICE	MSCHOICEST	
	For quick sample checks, following restriction digestion or PCR. MSMINI an economical choice for separation of up to 64 samples.	The same run lengths as the MSMINI but with up to 100 samples.	The perfect system for routine agarose electrophoresis. Up to 210 samples with multichannel compatible comb options for faster loading.	Increased sample capacity or migration length compared to the MSCHOICE to provide more versatility for the user	
Unit Dimensions (w x l x h)	9 x 21 x 9cm	12.5 x 22 x 9cm	17.5 x 26.5 x 9cm	17.5 x 41 x 9cm

MSMAXI	MSSCREEN	miniRAPIDE	MSMIDI96	miniONE
Suitable for RFLP analysis, southern and northern blotting preps and high throughput analysis with up to 550 samples.	Multichannel compatible combs included as standard for maximum efficient with high sample numbers. Screen an entire 96 well plate in a single run with excellent resolution and run length.	An ultra-compact self- contained system for routine molecular biology procedures and quick checks of samples. Buffer and gel volumes kept to a minimum to maximise current and separation speed. UV transparent for direct gel imaging	Rapidly screen a 96 well or PCR plate. Multichannel pipette loading with a 1.8cm run length allows samples to be resolved in under 30 minutes. Stretch version available for extended run length	An all in one power supply and gel tank with 3 preset voltages. Inbuilt timer to stop the run at the desired time and simple casting system for small, economical gels.

The multiSUB<sup>™</sup> series of Horizontal Gel Units offers the most versatile solution for DNA and RNA agarose gel electrophoresis currently available.

- Injection Moulded Construction
   durable, leak-proof environment for complete safety and long life
- Cassette Type Electrodes
   inexpensive, easy to replace
- Made of 99.99% corrosion resistant, pure platinum
- Electrical Safety lid can be located in one way only. On removal, power is disconnected from buffer chamber
- Multiple Gel Trays eliminate the need for additional gel tanks
- Unique gel cooling system
- Easy Click Lid Removal

All five units offer an unsurpassed combination of economy of gel and buffer volume, with gel size and sample number versatility.

Gel size and sample number requirements can be exactly matched in each unit, with the option of additional gel tray sizes. This eliminates the need for multiple gel tanks for changes in gel size or application.

All units feature removable UV transparent trays. For optimum value and versatility, systems are available with one, two or three tray options (dependent on model). Easy to use, leak proof 'plug and go' gel casting dams are included as standard to allow gels to be rapidly cast whilst the multiSUB unit is in use for gel running. With no indentations or casting gate grooves in the tray to interfere with sample progression, traditional tape casting can be used, should this be preferred.

Although lid connectors are compatible with most major power supplies, adapters are available to provide complete compatibility.

# Components of multiSUB gel chambers

- 1 Power Cables
- 2 Safety Lid & Viewing Pane
- 3 Height-adjustable comb
- 4 UV transparent gel tray
- 5 Comb slots
- 6 'Plug-and-Go' casting dams
- 7 Colour-coded electrodes with power plug connectors
- 8 Gel Platform
- 9 Safety lid thumb locators
- 10 Moulded tank

· four thicknesses, colour coded

black: 0.75mm for ultra resolved bands
white: 1mm supplied as standard
red: 1.5mm for maximising sample volume
blue: 2mm for maximising sample volume

- options for Sample Prep
- options for Multi-Channel Pipette Compatible

The number of samples can be maximised using high tooth number combs

Easy Click Lid Removal

unique clearsight

USB powered extraction fan

ClearSight lids solve the condensation build-up problem and so provide a perfectly clear view of the gel and the dye lane progression during the run. This is achieved using a USB powered extraction fan within the lid. ClearSight lids are available as components of complete systems or as upgrades.

For Horizontal

Package Deals

Casting dams

allow gels to be

rapidly cast externally while the multiSUB™ unit is in use for gel running

UK designed and manufactured

**multiSUB**<sup>™</sup> **Mini** is the smallest unit in the range, designed for low to medium numbers of samples.

The small gel size maximises run economy but does not compromise versatility as two tray options are available – **7 x 7cm and 7 x 10cm** – and combs ranging from preparative up to 16 samples. Simply by altering the gel tray or comb, this compact unit is capable of resolving up to 64 different samples, prepping 1ml of sample or separating sample bands over a distance of 9cm. For accessories see page 17 and for Power Supplies, see page 60.

# Buffer saver blocks

physically reduce the volume of a gel chamber and so reduce buffer requirements, saving cost, see pages 6 and 17

#### Molecular Grade Agaroses

are suitable for routine analysis of nucleic acids, see page 29

#### KEY FEATURES

multiSUB Mini is the preferred option for quick sample checks of small to medium volumes, particularly following restriction digestion during cloning. Its slim tray format makes MSMINI a very economical choice for separation of up to 64 samples.

- Available with 7 x 7cm, 7 x 10cm or with both gel trays
- Economic low gel and buffer volumes
- Small lab bench footprint

With gel tray options of 10 x 7cm and 10 x 10cm, multiSUB<sup>™</sup> Midi has been designed for routine horizontal gel electrophoresis.

Extending only the width of this unit allows more samples to be resolved per gel than multiSUB™ Mini without a significant increase in buffer or gel volumes. A maximum of 100 samples per gel can be resolved making this unit ideal for those routinely checking medium numbers of samples over short to medium gel run lengths. Scoops available as an option allow safe transfer of gels. For accessories see page 17 and for Power Supplies, see page 60.

Casting Dams allow gels to be rapidly cast externally while the multiSUB™ unit is in use for gel running, see pages 6 and 17

Adhesive Loading Guides allow easy well identification and sample loading, see page 17

#### KEY FEATURES

These units offer the same tray lengths as the multiSUB Mini but in a wider format, to run more samples just as economically under similar running conditions. Ideal for quick checks of samples from PCR and cloning:

- Available with 10 x 7cm, 10 x 10cm or with both gel trays
- Run up to 100 samples
- Low buffer volumes
- Ideal for rapid electrophoresis

# With its three tray options, multiSUB™ Choice offers a wide degree of versatility.

Three tray options are available – **15 x 7cm, 15 x 10cm** and **15 x 15cm** – allowing the choice of one, two or all three gel length options at the time of purchase. Maximising comb and tray options allow up to 210 samples to be resolved per gel. The 15cm total run length allows restriction fragment or other close MW sample bands to be easily separated and identified. Speed loading is accomplished using 10, 14,16 and 28 sample multichannel pipette compatible combs. **multiSUB™ Choice Stretch** units are available with optional **15 x 20cm** and **15 x 25cm** gel trays and four 28-sample combs for those researchers wanting to perform higher resolution separation of more samples over a longer distance. multiSUB™ Choice Trio includes all 3 tray sizes for optimum versatility and value. For

#### multiSUB Choice Trio includes all 3 tray sizes for optimum versatility and value

multiSUB Choice Stretch increases sample

capacity to 350

#### KEY FEATURES

multiSUB Choice is ideal for restriction fragment analysis, sample prep or checking of high numbers of samples.

- Three tray options
- Run up to 210 samples
- Low buffer volumes
- Multichannel pipette compatible combs for speed loading

# m u l f i s u B Maxi

**multiSUB**<sup>™</sup> **Maxi** is primarily designed for resolution of high numbers of samples such as from Clone Screening or PCR.

multiSUB™ Maxi allows ultra high-resolution separations over extended runs. Tray sizes correspond to standard blotter sizes.

It also allows easy sample transfer onto a membrane for further analysis. Four gel tray sizes are available – **20 x 10cm, 20 x 15cm, 20 x 20cm** and **20 x 25cm**. Multichannel pipette compatible combs up to 40 sample facilitate speed loading of up to 440 samples per gel. 50 sample combs allow maximum sample capacity of 550 samples per gel. Casting dams allow gels to be rapidly cast externally while the multiSUB<sup>M</sup> unit is in use for gel running. For Power Supplies, see page 60.

to be rapidly cast externally while the MultiSub™ unit is in use for gel running

Flexicaster allows casting of gel lengths up to 20cm, simply by locking the moveable dam, see page 17

#### KEY FEATURES

These units are primarily designed for separating high numbers of samples from PCR or cloning:

- Available with 20 x 25cm, 20 x 20cm, 20 x 15cm or 20 x 10cm gel trays
- Run up to 550 samples
- Low buffer volumes

# SUB Screen

multiSUB™ Screen was designed for rapid screening of very large numbers of Clone Screenings or PCR samples.

multiSUB™ Screen horizontal gel unit has a maximum sample capacity of 672 per gel. This allows loading and analysis of exactly seven 96 well format micro titre plates. The large gel run length of 32cm also allows resolution of samples over a long distance for separation of complex sample bands such as in restriction fragment analysis.

The unit is available with a full length tray or with other tray length options of 16 or 24cm so that the user's exact requirements can be matched. In addition to options for single length gel trays, multiSUB™ Screen is available with all three gel tray lengths to provide the maximum in flexibility, versatility and value.

Buffer recirculation ports are included as standard to allow enhanced resolution over extended runs while loading guides improve well visibility for easy sample loading. For Power Supplies, see page 60.

Leak free casting assured, even with agarose at 80°C

all multiSUB Screen combs

are multichannel pipette compatible

#### KEY FEATURES

multiSUB Screen is ideal for checking very large numbers of samples or extended high resolution separations

- Available with 26 x 16, 26 x 24 and 26 x 32cm or all three gel trays
- Run up to 672 samples
- Multichannel pipette compatible combs

buffer circulation ports included as standard

The multiSUB Series horizontal electrophoresis units include a range of accessories to enhance functionality and ease of use in the lab. Further accessories are available as optional extras and all accessories can be ordered separately and all parts are available as spares.

#### Accessories included as standard

#### Accessories available as options

multiSUB Horizontal Gel Chambers can accommodate a wide variety of casting combs. Standard options are shown below, while custom combs can be manufactured on request. To select a comb, just add the desired thickness to the end of the comb code to get the complete ordering code, for example, MS7-8-1 is a 1 mm thick comb and MS2-4-1.5 is a 1.5 mm comb. Well volume shown below is for 1 mm thick combs.

Colour-coded combs for the multiSUB are available in 4 thicknesses,

**Black** – 0.75mm for tightly resolved bands **Red** – 1.5mm to maximise sample volume

White - 1mm supplied as standard

Blue – 2mm to maximise sample volume

Black and white combs recommended for high resolution gels and publication quality data; red and blue to scale-up nucleic acid volumes for preparatory techniques.

#### CICCII

MS26-28MC, (34µl)

MS26-56MCSS, (14µI)

MCSS = fits multichannel loading every second row

The **multiSUB™ miniONE** electrophoresis system includes all of the equipment that you need to get up and running: gel tank, power supply and two casting sets. This gel tank/power supply combination is compact and easy to use.

multiSUB miniONE is an all in one horizontal electrophoresis unit. Featuring a built in power supply with voltage options of 35V, 50V and 100V, the miniONE is a versatile system suitable for a wide range of applications. A built in timer for runs from 0-99 minutes means you can set up your parameters and leave the system to complete the run automatically without fear of loosing bands.

The system comes complete with 2 gel casters for wide and mini gels as well as reversible combs for high throughput or high sample volume.

#### KEY FEATURES

miniONE electrophoresis system is ideal for personal use, small laboratories or the classroom.

- All in one horizontal electrophoresis system
- In built power supply with 35V, 50V and 100V settings
- Timer function for runs form 0 99 minutes
- 2 gel sizes and reversible comb options

# multisub Midi96

The **multiSUB™ Midi96 Gel System** allows a full 96 well plate to be loaded directly via an 8 channel pipette, making it perfect for high throughput work.

Its 10x12cm (W x L) gel dimensions and 96-well comb block format correspond to the standard microplate configuration. One or Two marker lanes and a run length of 1.8 cm for resolving DNA fragments. Multichannel pipette compatible well spacing allows fast sample loading.

MSMIDI96ST Stretch Systems are also available for those users requiring an extended run length per well of up to 3.6cm, or for loading of samples from two 96-well plates - MSMIDI96STDBL.

#### KEY FEATURES

multiSUB MIDI96 is Ideal for analysis of up to 96 PCR- fragment length polymorphisms loaded from 96-well microplates or thermal cycler blocks

- Ideal for high throughput electrophoresis
- Average run-time is just 15 to 30 minutes
- Direct microplate format for easy lane identification
- Multi-channel pipette compatible combs for speed loading

is designed for loading of DNA samples from multiwell plates

Comb blocks,

## multiSUB-4

multiSUB-4 is a compact system capable of running over 1200 samples simultaneously by stacking up to 4 horizontal gels.

Each multiSUB-4 is supplied with 4 gel trays and 8 combs as standard. Two double-sided comb and three tray length formats, 8x6, 8x12 and 8x18cm are also available. These multichannel-compatible combs and gel plate configurations are compatible with microplates and thermal cycler blocks to ensure rapid loading of DNA minipreps and PCR products by 8-channel pipette.

- Separates a maximum 1200 samples in as little as 15 minutes in 4 stacked gel trays
- Double-sided 1.5mm thick combs allow more sample volume to be loaded into each well
- Three gel tray options available in 8x6, 8x12 and 8x18cm (WxL) sizes for maximum flexibility
- Optional Flexicaster

# TECHNICAL SPECIFICATIONS Gel dimensions (w x l) 8 x 6cm, 8 x 12cm, 8 x 18cm Unit dimensions 11 x 35 x 16cm

Max. sample capacity per 18cm tray with 1cm run length: 306 with 2cm run length: 144 with 3cm run length: 72

Buffer volume 200, 400, 600 or 800ml

(for 1, 2, 3 or 4 gel trays resp.)

Combs available:

No. of samples 1, 8, 12, 18 DuoCombs Thicknesses 1, 1.5mm

Cleaver Scientific "safe" series represents a safer alternative to the use of UV irradiation and ethidium bromide, both of which are known to have harmful mutagenic effects.

runVIEW includes everything\* required to perform horizontal real-time gel electrophoresis with high resolution capability within a single compact bench top unit. The optional gel documentation system fits directly over the base unit and gel tank for imaging at the end of the electrophoresis run. runVIEW offers exceptional value, costing 30-50% less than individual components; gel tank, power supply and transilluminator

runVIEW is an innovative system that combines blue LED lighting and an inbuilt power supply to create a real time electrophoresis system giving you near instant verification of results. Perfect for saving time in quick sample check or for teaching the principles of electrophoresis.

place the gel tank and agarose gel onto the base station

load samples as with the standard MSCHOICE tank

fit the bluVIEW lid and start the run to observe band in real time

Original runVIEW CHOICE consists of an multiSUB CHOICE gel chamber with special bluVIEW lid, containing an orange spectral emission filter within its viewing pane, plus a base unit with integrated power supply and blue LED gel illuminator.

#### Track DNA without harmful UV

UV light can cause detrimental effects to the structure of DNA, meaning DNA extracted from UV imaged gels have significantly lower yields in downstream applications such as cloning and sequencing. Blue light, at a high wavelength massively increases downstream yield in comparison to UV when used for gel visualisation. Not only does the runVIEW system allow increased downstream reliability, it also protects the user from exposure to UV light, and provides a real time view of DNA migration, meaning constant check using gel documentation systems are no longer required.

#### No expensive commercial gels

runVIEW works with standard EtBr, SYBR Green and SYBR Safe gels cast within the 15x7, 15x10 or 15x15cm CHOICE gel trays, and therefore does not require expensive precast gels and accessories.

#### A self-contained system

The base unit, which houses the in-built power supply and blue LED gel illuminator, is compact, dual-voltage and portable, and allows electrophoresis, gel visualisation and extraction to be performed at the bench, without the inconvenience of having to transport gels to a darkroom elsewhere within the laboratory.

### runview

runVIEW systems consists of a multiSUB gel chamber with special bluVIEW lid, containing an orange spectral emission filter within its viewing pane, plus a base unit with integrated power supply and blue LED gel illuminator.

Three models comprise the runVIEW series, the original runVIEW™ CHOICE, plus runVIEW™ MINI and MIDI. All systems benefit from the blue light illumination of fluorescently stained agarose gels to allow users to view the size fractionation of nucleic acids in real-time. While runVIEW™ CHOICE features a power supply integrated within the base unit, for runVIEW™ MINI and MIDI, an adjustable blue-light illuminator platform accommodates both the MINI and MIDI electrophoresis tanks. Band visualisation is achieved through the corresponding lid containing an orange spectral emission filter. Each lid remains free of condensation through a built in extractor fan.

#### KFY FEATURES

These units are primarily designed to facilitate Real-time size fractionation and recovery of nucleic acids:

- Power supply integrated within the base unit adjustable in precise 1V or 1mA increments to a maximum 150V or 300mA constant voltage or current output; timer function to 999 minutes for extended runs
- Specialist combs for specialist applications doublesided 1mm preparatory combs (1-/2-sample and 4-/16-sample standard) included for nucleic acid recovery, plus four multichannel compatible 20-/28-sample combs for rapid screening of nucleic acids from 96-well thermal cycler blocks and microtitre plates. Extra thick 3mm preparatory combs also included for enhanced DNA recovery.

runVIEW MIDI

#### KEY FEATURES

RunVIEW™ MINI and MIDI are ideal for quick checks of low to medium numbers of samples following PCR and cloning.

- runVIEW™ CONVERTER package with emission filter lid and blue light illuminator, to allow standard MSMINI and MSMIDI units to be converted to real-time electrophoresis
- runVIEW™ STANDARD package includes blue light illuminator, and runVIEW™ MINI or MIDI tank, for those users with their own power supply
- Blue light is completely safe to both operator and DNA alike, and results in improved cloning efficiency compared to UV
- Emission filter lid with built-in extractor fan enables condensation-free viewing of gels

**runDOC** is a portable, lightweight gel documentation system with small footprint, designed exclusively for use with runVIEW.

The runDOC is designed exclusively to fit and complement the runVIEW to provide a complete realtime electrophoresis and imaging system. It comprises a lightweight darkroom hood and a high resolution 18 megapixel digital camera to capture images of nucleic acid gels stained with for example Et-Br, SYBR and runSAFE.

#### KEY FEATURES

- All-in-one system The runDOC and runview provide a complete real-time electrophoresis and imaging system
- Traditional gelDOC The 18 megapixels CMOS camera of the runDOC enables to capture high resolution publication quality images using the runview base as a transilluminator
- Versatile Interchangeable filter slides and bluVIEW filter allow to capture images of DNA bands stained with a variety of safe stains such as runSAFE, SYBR green, Et-Br etc.

### r u n s a f $\Xi$

The runSAFE range comprises four stain and loading dye combinations to visualize electrophoretic mobility of a wide range of DNA in agarose gels.

runSAFE is conveniently supplied in a 6x loading dye which is mixed with 5 parts double-stranded DNA before loading onto an agarose gel. runSAFE is non-toxic, safe for the environment and can be disposed of in the regular laboratory waste without using expensive decontamination methods. runSAFE is sensitive and binds DNA to detect as little as 0.2ng DNA per band within a gel; while gel imaging is best performed using the amber emission filter found on the bluVIEW lid or runDOC filter slide. The runSAFE Range is comprised as follows::

- runSAFE general purpose stain for DNA ranging from 50bp markers to large super-coiled plasmid
- runSAFE-PLUS500 for DNA larger than 500bp in size
- runSAFE-2000 for DNA vectors and inserts ranging from 500-2000bp
- runSAFE-500 for small DNA fragments, PCR products, sequence tracts and primers less than 500bp

#### KEY FEATURES

- Safe all four runSAFE stains have ultra-low toxicity (LC>5000mg/kg) and lack cell permeability
- Convenient each stain is supplied as a ready to use 6x Loading dye; simply add 1 part stain to 5 parts DNA, mix and load your gel
- Fast no time-consuming post-staining or de- staining of gels is required.
- Sensitive very low background staining of the gel; detects as little as 0.2ng DNA per band
- Flexible each stain may be used with Blue or UV light

### runSAFE - less DNA damage, improved cloning efficiency

Slower migrating species, indicative of a linear or relaxed circular vector, resulting from DNA nicking or strand breaks, are significantly reduced in DNA plasmid mixed with run-SAFE and exposed to blue light. The concentration of nicked DNA plasmid increases significantly after 8' of exposure to EtBR and UV irradiation.

# gel cutting tips

Gel Excision Tips offer a convenient and efficient one handed method of removing bands using a simple and rapid two-step process. The tips, in two sizes, 4.0 x 1mm and 6.5 x 1mm, cut directly into agarose or acrylamide gels, so eliminating cross contamination between samples. Alternative methods which require multiple steps including washing or rinsing are slow and tedious. These tips allow a safe and efficient one handed operation, with a push button gel and tip release, providing researchers with uniform extractions. Tips fit standard 1000µl pipettors and are available in bags and racks.

## dnaladders

Pre-made and containing loading dye for immediate use, Cleaver Scientific's ready-to-use DNA markers are specially formulated to run accurately and produce sharp, well defined ladders.

Available in six molecular weight ranges and composed of discrete marker fragments isolated from restriction-digested proprietary plasmids, each DNA marker will remain stable for up to 6 months at room temperature and 12 months if kept in the fridge at 4°C. Each marker contains high intensity reference bands and may be used to perform size comparisons with DNA molecules ranging from the smallest of PCR fragments to large, linearised cosmid vectors.

# buffers&DYES

Cleaver Scientific offers a range of concentrated buffers and loading dyes to complement the EZEE multisub horizontal electrophoresis range and to offer a complete solution for the users. These are ideal for laboratories running horizontal nucleic acid gels on a daily basis that require high quality reagents for reproducible results.

**TBE** and **TAE** buffers Nucleic acid agarose gel electrophoresis is usually conducted with either Tris-acetate-EDTA (TAE) buffer or Tris-borate-EDTA (TBE) buffer. While TAE buffer provides faster electrophoretic migration of linear DNA and better resolution of supercoiled DNA, TBE buffers have a stronger buffering capacity for longer or higher voltage electrophoresis runs. The buffers are available either as ready-to-use stock solutions (50xTAE and 10xTBE) or as dry powder that just need to be reconstitute in distilled water to provide a 10x stock solution (TBE only)

10X Bromophenol Blue DNA loading dye, the standard tracking dye for electrophoresis. The charge-to-mass ratio of bromophenol blue allows it to co-migrate with smaller molecules within agarose and PAGE gels (e.g. at 300bp in a standard 1% agarose, TBE gel) which, with its conspicuous dark blue colour, makes it the perfect tracking dye to monitor the progress of electrophoresis runs. DNA loading dye is supplied in 1ml volumes for easy handling.

**Orange G Loading dye 1x (with ficoll)** Used as a marker in PAGE and Agarose electrophoresis of DNA, as it migrates through the gel consistently with smaller DNA fragments. Contains sucrose and Xylene Cyanol. Used as a 1x solution.

RNAse free water, DEPC-treated to eliminate enzyme activity and then autoclaved, this sterile highly purified water product is perfect for use in PCR and Northern blotting techniques. RNase-Free water is available either as a single 250ml bottle or in fifty 5ml aliquots to prevent cross-contamination.

#### **TECHNICAL SPECIFICATIONS**

TAE FINAL CONSTITUENT CONCENTRATIONS: TRIS ACETATE 0.04M, EDTA 0.001M, PH 8.0

TBE FINAL CONSTITUENT CONCENTRATIONS: TRIS 0.089M, BORIC ACID 0.089M, EDTA 0.002M, PH 8.3

**Purified water (18 mega Ohms)** for use with sensitive experimental procedures often needs verifying as pyrogen free, this is done using the LAL test or Limulus (Horseshoe crab) amoebocyte lysate assay. The LAL test is extremely sensitive to endotoxins which are the result of bacterial lysis. BP Grade Sterile Water has endotoxins removed by electrostatic filtration at the final purification stage prior to autoclaving. The LAL tested water conforms to the standard having less than <0.25EU/ml to ensure the water is of pr-requisite quality. This product is therefore pyrogen free. CFU>0 WFi compatible.

# agaros =

Cleaver Scientific CleverGEL is an environmentally friendly agarose suitable for analysis of nucleic acids using standard electrophoretic procedures. Available as standard Low EEO, High Resolution PCR grade, Low melting point and Instant agarose tablets.

CleverGEL is available as standard Low EEO, High Resolution PCR grade, Low melting point and Instant agarose tablets.

#### KFY FFATURES

#### CleverGel Low EEO agarose:

- Ideal for routine analytical electrophoresis and blotting of DNA and RNA 0.1-10Kb in size
- Low EEO
- High gel strength

#### CleverGel High Resolution – PCR grade:

- High Resolution
- Low background for analysis of fragments 20-800bp

#### **CleverGel Low Melting Point:**

- Used for nucleic acid recovery
- typically resolves fragments 200bp to 25Kb

#### CleverGel Instant Agarose Tablets:

- Faster and simpler to prepare
- Low EEO
- Consistent gel percentage

# The omniPAGE range of vertical gel electrophoresis combines ease of use with high resolution separations.

Cleaver Scientific provides a comprehensive range of vertical electrophoresis systems - complete with tanks, inserts and reagents – to fulfil a variety of applications and techniques in different gel sizes and throughputs. The omniPAGE range comprises three sizes of gel chamber, Mini 10 x 10cm, Mini Wide 20 x 10cm and WAVE Maxi 20 x 20cm. Together they share a host of common features including a guaranteed leak proof seal required for trouble free and rapid gel casting. Mini systems are compatible with a wide range of precast gels meaning you won't need to change from your gel when switching to a Cleaver tank.

High quality injection moulded construction and durable leakproof design for complete safety and longevity.

**Electrical safety** – lid removal immediately disconnects power to the lower buffer chamber to allow entirely safe access to the gel.

**Unique sliding-clamp technology** – within PAGE insert allows rapid set up of handcast and precast gels.

RUNNING MODULE DESIGN

Casting and running – dual purpose PAGE inserts eliminate time- consuming transfer of glass plates between separate casting and running modules. Cam-Pin caster locks PAGE insert onto the ultra-soft silicone mat within casting base to provide a leak-free seal.

Combs and spacers are injection moulded for consistency and 'clean' well formation.

#### Available in four thicknesses and colour-coded. Range from:

- Black 0.75mm for tightly resolved bands
- White 1mm supplied as standard
- Red 1.5mm to maximise sample volume
- Blue 2mm to maximise sample volume

**Black** and **white** combs recommended for high resolution gels and publication quality data; **red** and **blue** to scale-up volumes for preparatory techniques.

Interchangeable Modules – for PAGE and 2-D electrophoresis as well as electroblotting using a single universal buffer tank

**Glass Plates** – at 2mm thick for mini vertical systems and 4mm for maxi models, Cleaver Scientific plates are more durable and so provide long service lives. Available plain, notched, with or without bonded spacers.

Run up to 4 gels at a time – While most vertical gel units can run only one or two gels, omniPAGE Mini units can run one, two or up to four gels at any time using a triple glass plate sandwich.

**Effective buffer cooling** – a simple to use cooling pack system ensures enhanced resolution without costly and time consuming additional equipment. No chiller, tap or obstructing connecting leads are required. The cooling pack is simply pre-chilled in a freezer and placed in the gel tank. Additionally, the use of cooling packs reduces buffer volume

Vertical gel systems

- Durable Injection moulded construction for leak-proof environment
- Designed & manufactured in United Kingdom

# Vertical Gel Systems SELECTION GUIDE

ON AN HOA	OF MAINIL	CVCTENA	
CIVINIPA	GE MINI	SYSTEIVE	

- Run 1-4 handcast gels, and up to 2 precast gels in mini format
- Sliding clamp assembly ensures fast set up times and leak-free operation
- Insert for both gel casting and running eliminating timeconsuming transfer of fragile gels
- Modular design for rapid turnaround of data, allowing PAGE, 2-D and blotting to be completed within a working day

#### **OMNIPAGE MINI WIDE SYSTEM**

- Mini wide format effectively allows 2 mini gels to be compared within a single gel for gel-to-gel reproducibility
- Run 1-2 handcast gels; perfect for users with >20 samples to compare and resolve
- Even pressure screw system prevents gel leakage
- Combine pl (isoelectric point) separation with speed by resolving 2x 7cm IPG strips or 2x 8cm capillary tube gels per gel using special 2-D gel combs and plates
- Ability to perform three techniques in a day: IEF, PAGE and blotting

# omnipage Mini

The perfect unit for routine vertical electrophoresis using pre-cast or hand-cast gels. The omniPAGE MINI features injection moulded construction for leak proof running, and a simple clamp system to ensure a tight seal between buffer chambers to prevent current leakage.

Gel casting and running is done using the same internal module, no transfer of glass plates during gel casting is necessary. The module features unique sliding gates, to allow very rapid set up of both hand cast and precast gels. Ultra soft silicone seals and pressure bars which surround the glass plates guarantee leak proof gel casting. 2mm thick glass plates minimise breakage and have bonded spacers for convenience.

#### MINI TETRAD

A 4-gel TETRAD system is created by simply introducing additional plates with spacers and appropriate combs. TETRAD is supplied with a casting base and external casting upstand to allow gels to be prepared in advance, ready for the next run.

### interchangeable modules

Electroblotting Module – Complete with Platinum wire electrodes, 4 blotting cassettes and fibre pads to aid compression, this insert fits neatly into the omniPAGE Minitank for Western Blotting.

# High Intensity Electroblotting Module – with 2 blotting cassettes and Platinum plate electrodes, the high intensity blotting module allows fast transfer of proteins to membranes with excellent time savings.

Capillary IEF Module - the Tube Gel Module includes a rapid release gasket for easy tube extraction. Focusing can be accomplished in as little as three hours.

#### KEY FEATURES

Mini SDS PAGE, Native PAGE, Gradient, Second dimension and Nucleic acid separations

- Injection moulded construction
- Compatible with all 8 x 10 and 10 x 10cm precast gels
- Rapid gel casting and loading
- Low buffer volumes
- Rapid set up cooling
- Run up to four gels in tetrad model

### simple, rapid, leak-proof gel casting....

Dual purpose PAGE module eliminates time-consuming transfer of glass plates between separate casting and running

Ground glass plates with bonded injection moulded spacers consistent with comb thickness ensure 'clean' well formation, as well as the correct alignment for leak-free casting; also eliminate the need for easily mislaid and awkward to use spacer aligners

Very forgiving, ultra-soft silicone mat within cam-caster compensates for glass plate misalignment to ensure leak-free casting

Insert glass plates between pressure frame and gasket

Slide gates to make efficient seal

Transfer to casting base and tighten cams

Insert gel solution and comb and allow to polymerise

leak-free seal

Transfer to tank and fill with

Load samples using Loading Guides and run

## PAGE Mini Modular Systems

Mini wide vertical gel unit, with a gel width of 20cm, effectively allows double the number of samples to be resolved as the mini unit. This allows consistency of sample comparison on a single gel and is designed for those with greater than 20 samples to compare and resolve. Simple set up using ultra soft silicone seals guarantees trouble free glass plate loading and gel casting.

Each Modular System comprises the Gel Chamber, PAGE Internal Running Module, Casting Base and various accessories. Through the addition of further modules, the packages flexibility is increased to allow Western blotting and Capillary IEF.

The Maxi 'WAVE' System is designed to perform a variety of separations, including first- and second-dimension SDS-PAGE, native, preparative, gradient and high-resolution nucleic acid electrophoresis, plus capillary tube gel IEF and electroblotting, the Maxi WAVE is one of the most versatile maxi vertical systems available.

The innovative, vertical screw-clamp system within the PAGE insert requires only four screws to secure up to four 20x20cm gels. This gives the Maxi WAVE the advantage of a much faster set up time compared to products whose traditional clamping configurations require as many as 24 screws to secure just two glass plates. In addition, the WAVE's innovative vertical screw-clamp configuration distributes pressure evenly along the height of the gel rather than in the centre to eliminate plate bowing and gel compression. This still maintains a leak-proof seal during casting; while the ergonomic wave-like design of the PAGE insert aids both handling and set up.

A detachable inner cooling coil connects to the laboratory water supply or a recirculating chiller to provide uniform, smile-free electrophoresis, while allowing runs to be performed at higher voltage.

#### MAXI WAVE TETRAD

A 4-gel TETRAD system is created by simply introducing additional plates with spacers and appropriate combs. TETRAD is supplied with a casting base and external casting upstand to allow gels to be prepared in advance, ready for the next run.

External Casting Upstand is basically a standard internal module but without Platinum wire

#### KFY FFATURES

- Run up to FOUR gels simultaneously [TETRAD systems]
- Only four screws required to secure glass plates significantly reduces set up time
- Vertical screw-clamps distribute pressure evenly along the height of the gel to prevent plate bowing and gel compression
- Detachable inner cooling coil facilitates rapid and uniform, smile-free electrophoresis, even at higher voltages
- Injection moulded construction guarantees long life with reliable and consistent performance

### **Gel Casting**

Dual purpose PAGE insert eliminates time-consuming transfer of glass plates between separate casting and running modules

Ground glass plates with bonded injection moulded spacers consistent with comb thickness ensure 'clean' well formation, as well as the correct alignment for leak-free casting; also eliminate the need for easily mislaid and awkward to use spacer aligners

Very forgiving, ultra-soft silicone mat within cam-caster compensates for glass plate misalignment to ensure leak-free casting

Assemble each gel cassette on a flat level surface, by placing the plain glass plate down with the spacers facing upwards followed by the notched glass plate.

Loosen the vertical screwpins in the PAGE insert to release the locking mechanism, allowing the gel clamps to sit in the resting slots.

Insert a gel cassette into each side of the inner buffer chamber in the PAGE insert, and begin tightening the vertical screw-pins.

Continue to tighten the screw-pins until the gel clamps glide out of the resting slots and fix firmly against the glass plates pushing them unright.

Check the bottom of the glass plates to ensure that they are flush together, and place the PAGE insert on the casting base; make sure that the cams are facing downwards.

Insert cams and turn until tight, drawing the PAGE insert onto the casting to form a leak-proof seal.

Pour in the gel solution, insert the combs and allow the wells to polymerise.

Transfer the PAGE insert to gel the tank. Fill the inner and outer buffer chambers before loading samples

Replace the lid, connect to the power supply and run.

#### VS20WAVECES Complete Maxi WAVE (20x20cm) Vertical Electrophoresis Modular System, comprising:

1x Maxi WAVE Vertical Unit, VS20WAVESYS (1) which includes: 2x4mm thick notched glass plates, 2x4mm thick plain glass plates with 1mm thick bonded spacers, 1x blanking plate, 2x combs (1mm thick, 24 samples), 1x casting base, silicone mat, cooling pack

plus: 1x Electroblotting Module, VS20BI (3) comprising: internal electroblotting module, 4x compression cassettes for gel sizes up to 20x20cm and 18x fibre pads plus: 1x Capillary Electrophoresis Module, VS20DCI (2) which includes: internal running module for tube gels, capillary tubes, blanking plugs and 1x VS20WAVE IEF-KIT: 1 set of plain glass plates with bonded spacers, 0.6x20cm (WxH); and 2x 2-D combs with one 3.5mm marker lane and one 18cm preparatory well

#### VS20WAVEC2DS Complete Maxi WAVE 2-D System, comprising:

1x Maxi WAVE Vertical Unit, VS20WAVESYS (1) which includes: 2x4mm thick notched glass plates, 2x4mm thick plain glass plates with 1mm thick bonded spacers, 1x blanking plate, 2x combs (1mm thick 24 samples), 1x casting base, silicone mat, cooling pack

plus: 1x Capillary Electrophoresis Module, VS20DCI (2) which includes: internal running module for tube gels, capillary tubes, blanking plugs and 1x VS20WAVE-IEF-KIT: 1 set of plain glass plates with bonded spacers, 0.6x20cm (WxH); and 2x 2-D combs with one 3.5mm marker lane and one 18cm preparatory well

#### VS20CBS Complete Maxi WAVE (20 x 20cm) Vertical Electrophoresis & Blotting System, comprising:

1x Maxi WAVE Vertical Unit, VS20WAVESYS (1) which includes: 2x4mm thick notched glass plates, 2x4mm thick plain glass plates with 1mm thick bonded spacers, 1x blanking plate, 2x combs (1mm thick, 24 samples), 1x casting base, silicone mat, cooling pack

plus: 1x Electroblotting Module, VS20BI (3) comprising: internal electroblotting module, 4x compression cassettes for gel sizes up to 20x20cm and 6x fibre pads

#### VS20CBS-HI Complete Maxi WAVE (20 x 20cm) Vertical Electrophoresis & High Intensity Blotting System, comprising:

1x Maxi WAVE Vertical Unit, VS20WAVESYS (1) which includes: 2x4mm thick notched glass plates, 2x4mm thick plain glass plates with 1mm thick bonded spacers, 1x blanking plate, 2x combs (1mm thick, 24 samples), 1x casting base, silicone mat, cooling pack, plus: 1x High Intensity Electroblotting Module, SB20BI-HI (4) which includes: internal electroblotting module, 2x compression cassettes for gel sizes up to 20x20cm and 6x fibre pads

omniBlot Maxi Insert, including 4x cassettes, 18x foam pads

VS20-BI

VS20BI-HI omniBlot Maxi High Intensity Insert, includes 1x casette, 6x fibre pads

omniBlot Maxi 20 x 20cm Blotting System

omniPAGE Vertical Gel Chambers can accommodate a wide variety of casting combs. Standard options are shown below, while custom combs can be manufactured on request. To select a comb, just add the desired thickness to the end of the comb code to get the complete ordering code, for example, VS10-4-1 is a 1 mm thick comb and VS20-24-1.5 is a 1.5 mm comb. Well volume shown below is for 1mm thick combs, except for Sharks Tooth combs which are 0.25mm. For volume of other thicknesses, please refer to the Cleaver Scientific website.

Colour-coded combs for the multiSUB are available in 4 thicknesses,

**Black** – 0.75mm for tightly resolved bands **Red** – 1.5mm to maximise sample volume **Blue** – 2mm to maximise sample volume

Black and white combs recommended for high resolution gels and publication quality data; red and blue to scale-up nucleic acid volumes for preparatory techniques.

NOTE: volume refers to maximum well volume of the longer tooth

CSQ33-0.25-48 (7µI)

CSQ33-1-48SQT, (35µI)

CSQ233-1-80SQT, (20µI)

CSQ33-0.25-96, (3µI)

## PAGE Gradient Mixers

Ideal for Caesium, Sucrose and Gel gradients the Gradient Mixer series comprises two chambers - a reservoir and a mixing chamber with an interconnecting valve. A second valve regulates the output flow from the mixing chamber. All mixers have a flat base which allows them to be placed on a magnetic stirrer. A magnetic stirring bar can be placed directly in the mixing chamber to ensure a constant gradient. The support rod allows the mixer to be fixed to a retort stand for extra stability.

## Multiple Gel Casters

Advance casting of multiple mini and maxi gels can help to achieve consistent results between runs. These multiple gel casting systems are tailored for use with omniPAGE mini and omniPAGE maxi vertical electrophoresis units; with three models of 6, 12 and 24 gel capacities. Fewer gels can be poured if required using the acrylic saver blocks supplied

The fixed hinged clamps allows the gel sandwich to be adjusted to the correct pressure irrespective of the number or the thickness of gels being poured. Separation sheets allow the easy separation of the glass plates after pouring.

These Gel-Loading Pipette Tips are designed for sample loading of electrophoresis gels. They provide positive-displacement accuracy and reproducibility using Pipetman and most other single channel air-displacement pipettors. RNase/DNase-free Tips comprise three styles, each featuring a flexible, 33mm long, 5µl microcapillary tube sections:

- Round-shaft Tip, with 0.57mm OD tube end these greatly improve loading techniques for 0.75, 1.0 and 1.5mm PAGE gels.
- Intermediate 0.37mm OD flat Tip is ideal for loading 0.4mm sequencing gels.
- Ultra-thin 0.17mm OD ultra-flat Tip is perfect for loading 0.2mm wedge-spacer gels.

#### KEY FEATURES

- Two styles Round or Flat (Duckbill)
- 'Unifit' design provides tight seal
- Complete visibility of sub-microlitre volumes - 200ul models

(83mm) at 5µl; 2μl/10μl models at 2μl

Metal and RNase free

## The Maxi Plus unit provides a convenient solution for the second stage of 2-D electrophoresis.

The 26cm active gel width provides a large gel area to resolve large IEF strips. In combination with the IEF system, this offers a complete package for 2-D electrophoresis. The unit utilises the omniPAGE advanced design features to provide convenient ease of use with high resolution separations.

Rapid set up cooling retains resolution in extended separations and also saves on buffer volume without affecting run quality. Four gels can be resolved per run. A wide range of accessories is available to allow easy transition between 2-D and standard vertical electrophoresis techniques. In particular different types of 2-D comb allow a wide degree of versatility in sample selection and gel set-up.

- Ideal for second dimension electrophoresis
- Accepts strips up to 26cm in length
- Rapid set up coolpacks for enhanced resolution

## Omnipage Blot Transfer Systems

Electroblotting is a technique to immobilise proteins or nucleic acid separation on a solid membrane support. Samples are then detected using specific antibodies, ligands or nucleic acid probes that bind to individual proteins or nucleic acid sequences. This allows identification, quantification or interaction's study of proteins and nucleic acid from various samples, and makes it a powerful technique in proteomics and genomics.

Cleaver Scientific offers four types of system:

**MODULAR ELECTROBLOTTERS** – combine PAGE and transfer techniques within the same tank. These options are shown in the PAGE vertical sections

**TANK TRANSFER SYSTEMS** – available with either plate or wire electrodes, support efficient, quantitative transfers over a wide molecular weight range. Plate electrode systems are faster through greater field strength; wire electrodes are more economical, consuming less current and generating less heat.

**SEMI-DRY TRANSFER SYSTEMS** – perfect for rapid, high-intensity transfers of mid-range proteins, 10-100kD in size.

MICROFILTRATION (DOT AND SLOT BLOTTING) – does not require electrophoresis and is used to determine the working conditions for a new blotting assay, antibody titres and antibody-antigen specificity. Also suitable for nucleic acids

#### TankBlot Electroblotters

Designed primarily for wet electroblotting of proteins, these Electroblotters offer a combination of increased capacity with economy saving features.

Both units, Mini  $10 \times 10$ cm and Maxi  $20 \times 20$ cm, have increased capacity over standard systems with up to five gel blot cassettes utilised at any one time. This is especially useful in high throughput laboratories.

A uniform electric field is provided by a high intensity coiled electrode and ensures uniform transfer across the blot surface. The cassette's open architecture ensures the maximum blot area allows direct transfer of current. Its rigid construction ensures contact between the gel and membrane is retained throughout the blot and an even pressure is

maintained. These units are compatible with magnetic stirrers to aid heat dispersal and prevent pH drifts in the buffer due to incomplete buffer mixing. Each system includes a cooling pack to further enhance transfer efficiency by removing excess heat. This also saves on buffer for added economy.

- Ideal for wet electroblotting of proteins -Western blotting
- Up to five gel blot cassettes utilised at any one time
- Hinged cassettes for added convenience
- Accommodates gel thicknesses from 0.25 up to 3mm

#### Semi Dry Blotters

These Semi Dry Blotters offer rapid transfer times for DNA, RNA and protein blotting - typically 15 to 30 minutes.

All units can be used for all types of blotting: western, southern and northern via uncomplicated buffer and set up procedures and are compatible with gel thicknesses from 0.25 up to 10mm without the need for additional equipment.

Semi Dry Blotting has the added benefit of economic transfers due to very low buffer volumes – typically only a few millilitres of buffer are required per transfer. The electrodes, comprising platinum coated anode and stainless steel cathode, will exhibit practically no

corrosion and so provide many years of trouble free use. Uniform heat dispersion across the blot sandwich ensures stable transfer times and no heat induced sample loss or transfer distortions.

#### KEY FEATURES

- Rapid transfer times
- Western, Southern and Northern Blots
- Economic Transfers due to very low buffer volumes
- Screw down lid accommodates gels from 0.25 up to 10mm
- Uniform heat dispersion

#### Dot and Slot

Dot Blot and Slot Blot microfiltration manifolds are designed for DNA and RNA filter blot hybridisations and immunological (Ag/Ab) screening applications.

Machined from high density acrylic, their precision lapped mating surfaces and leak proof gasket ensures uniform filter contact, preventing lateral transfer of samples- smudging - by ensuring that a complete vacuum is formed. A permanent filter template is provided with each manifold to simplify the cutting of filters to the exact size. A vacuum of approximately 600mm Hg (0.8 Bar) is required during sample application. Four configurations are available for 24 & 48 for slots and 48 & 96 wells for dots in the configuration of standard microplates. Each well is alpha-numerically grid referenced for easy identification.

- Low cost
- Easy assembly
- Alpha-numeric sample identification
- Four sample configurations

### **PAGE Buffers**

Five buffers are available in powder sachets for a range of native and denaturing protein gel electrophoresis techniques.

Each powder sachet, which is supplied as a 10-pack, may be reconstituted to make 1 litre of working solution. Running buffers are also available in 1 litre and 5 litre volumes as ready made 10x Tris-Glycine and 10x Tris-Glycine-SDS solutions.

#### KEY FEATURES

- Convenient, pre-made stock solution or powder – just dilute or dissolve as necessary with water
- Save time & trouble no weighing, pH adjustment or need to stock individual compounds
- Long shelf-life
- Consistency assured rigorous QC for reproducible separations

Technical Specifications			
Powder Buffer	Composition	Applications	
Tris-Glycine SDS	Each litre of 1x working solution contains: Tris-base (25mM); glycine (192mM); SDS, 0.1% (w/v); followed by distilled water. Working solution pH = 8.3.	Denaturing SDS-PAGE for most cel- lular proteins, 10-200kDa in size	
Tris-Glycine	Each litre of 1x working solution contains: Tris-base (25mM); glycine (192mM); followed by distilled water. Working solution pH = 8.3.	Native PAGE	
Tris-Tricine-SDS	Each litre of 1x working solution contains: Tris-base (0.1M); tricine, (0.1M); SDS, 0.1% (w/v); followed by distilled water. Working solution pH = $8.25$ .	Denaturing SDS-PAGE, with greater resolving power for small proteins 2-20kDa in size	
MOPS-SDS	Each litre of 1x working solution contains: MOPS (50mM); Tris Base (50mM); SDS, 0.1% (w/v); EDTA (1mM); followed by distilled water. Working solution pH = 7.7.	Denaturing SDS-PAGE for medium- to large-sized proteins	
MES-SDS	Each litre of 1x working solution contains: MES (50mM final stock concentration); Tris Base (50mM); SDS, 0.1% (w/v); EDTA (1mM); followed by distilled water. Working solution pH = 7.3.	Denaturing SDS-PAGE for small- to medium-sized proteins; faster than MOPS	

## BP Grade ultra pure water

BP Grade Sterile Water has endotoxins removed by electrostatic filtration at the final purification stage prior to autoclaving. The LAL tested water conforms to the standard having less than <0.25EU/ml to ensure the water is of pre-requisite quality. This product is therefore pyrogen free. CFU>0 WFi compatible.

#### Ponceau S

Ponceau S staining solution is reusable and available in a convenient 500ml volume for membrane staining and early protein detection following transfer before western blotting. Ponceau S may also be supplied a powder staining kit for long-term storage.

### **Protein Markers**

Stable for up to 2 years if stored at -20°C and supplied pre-stained in gel loading buffer for direct loading, Cleaver Scientific PINK Plus and BLUE Wide Range recombinant protein markers are perfect for SDS-PAGE applications.

Sizes range from 10-175kDa for PINK Plus and 10-245kDa for BLUE Wide Range, making both markers suitable for accurate molecular weight determination of most cellular proteins.

Each marker is covalently bound to a pink or blue colour chromaphore to produce a ladder of evenly interspersed bands of uniform intensity. Coloured reference bands serve as visual indicators of electrophoresis run progression and the efficiency of western transfer onto membranes following SDS-PAGE. Both PINK Plus and BLUE Wide Range markers can be detected at volumes as low as 2.5µl per well.

## Blotting membranes

Used in Western blotting, Slot and Dot blotting, Southern and Northers blotting. PVDF with nitrocellulose (proteins) and nylon (RNA and DNA) membranes are available for different application needs and in different formats. We supply membranes in sheet form and as a 3M role which can be cut to size to fit experimental needs.

## Blotting membrane rolls

Supplied in 0.24x3m and 0.3x3m (w x l) sizes, allowing them to be cut to match specific gel formats, these membrane rolls are suitable for transfer of proteins and nucleic acids from polyacrylamide and agarose gels. Offered in 0.2µm and 0.45µm pore sizes.

## Blot absorbent filter paper

This blot-absorbent filter paper is supplied in packs of 50 and in sizes of 10x10cm and 20x20cm. Its 1mm thick texture and high buffer retention properties, being able to absorb twice its own weight in buffer, allow it to exert the gel-membrane compression needed for efficient transfers

## **Protein Gel Staining**

**EZEE RubyPro** is a ready to use kit for rapid and sensitive protein staining of 1D and 2D SDS PAGE gels. It enables high contrast and optimal visualization and quantitation of proteins. The staining procedure is a simple 220 minute, three step protocol. The fluorescent stain involves simple dye-binding mechanisms rather than chemical reactions that could alter protein functional groups. Thus, downstream applications are not affected and after staining, proteins can be

analyzed by mass spectrometry directly. The dye has optimal excitation at 302 and 470 nm, with maximum emission at approximately 610 nm.

EZEE RubyPro can be excited with UV-light transilluminator, 405, 445, 473-488 nm laser sources or 470nm blue LED light source.

**EZEE UltraBlue** is a sensitive, safe and environmentally friendly protein stain compatible with mass spectrometry. EZEE UltraBlue is an enhanced Coomassie-based protein stain formulated for fast and sensitive protein detection without the involvement of hazardous chemicals such as methanol and acetic acid. Protein detection limits are as low as 10ng and visualization can be achieved in less than 1 hour

#### KEY FEATURES

- High purity dye: >98%
- Optimal signal to background ratio
- Strong, uniform and reproducible signal from 0.2ng to 10ng protein
- Fast staining protocol (220 min)
- Convenient: ready to use kit fixing and de-staining solutions included in the kit
- Mass spectrometry compatible

#### KEY FEATURES

- Applications includes: native PAGE, SDSPAGE, isoelectric focusing, and 2D gels
- Sensitive detection of protein concentration as low as 10 ng
- Speed optimal protein bands visualization within 10 minutes
- Safe absence of hazardous chemicals such as methanol, acetic acid, and other toxic agents

## **Blocking Buffer**

**JUSTBLOCK** is an all-in-one blocking solution for Western blot analysis. By all-in-one we refer to its capability to perform in only one step, blocking, primary and secondary antibodies hybridization as well as enhancing the signal developed from HRP (horseradish peroxidase) or AP (alkaline phosphatase) substrates. **JUSTBLOCK** therefore functions as both blocker and enhancer in Western analysis

#### JUSTBLOCK: Western Blocking Solution and Signal Enhancer

- Time-saving 3 steps in one: Block the membrane and dilute lary & 2ary Abs in one step
- Enhance antibody signal: It shows a two- to five-fold increase in signal intensity for most protein targets, enabling low concentration proteins to be detected
- Universal antibody diluent: Ready-to-use dilution buffer for most lary & 2ary Abs
- Effective with any ECL substrates: the signal can be developed with both HRP (horseradish peroxidase) and AP (alkaline phosphatase) substrates
- Compatible with PVDF & NC membrane: Regardless of the pore size, JUSTBLOCK minimises the background from non-specific protein binding
- Improve protein detection: Improve the binding process of target proteins, so that specific antibodies can bind more effectively

## **ECL Substrates for Western Blotting**

The Lumi range of ECL substrates are luminol-based enhanced chemiluminescent substrates which produce sensitive signals and are compatible with antibodies conjugated with horseradish peroxide (HRP).

LumiGO is an ECL substrate with stable light output for low picogram detection level. The formulation provides a low background for a high signal to noise ratio.

LumiPRO is our top performance product with an extremely high signal intensity and stable light output for low femtogram detection level. The formulation provides a low background for a high signal to noise ratio.

#### Recommended antibodies dilutions

Primary: 1:500 - 1:5,000 Secondary: 1:20,000 - 1:100,000 (from 1 mg/mL stock solution)

#### Recommended antibodies dilutions

Primary: 1:5,000 - 1:100,000 Secondary: 1:100,000 - 1:500,000 (from 1 mg/mL stock solution)

For more information on Enhanced Chemiluminescence Reagents

#### KEY FEATURES

- Low picogram detection
- Long signal duration
- Working solution stable for at least three days
- The best entry level ECL substrate on the market
- Stable for 1 year at room temperature.
   Product is shipped at ambient temperature

#### KEY FEATURES

- Low femtogram detection
- The ECL substrate with the highest signal on the market
- Working solution stable for at least three days
- Low antibody consumption to save money
- Working solution stable for three days at least 8 hours
- Stable for 1 year at room temperature.
   Product is shipped at ambient temperature

ECLONE LuniGO ECL substrate kit: 125ml Luminol/enhancer solution (A); 125ml Peroxide solution (B) ECLULTRA LumiPRO ECL substrate kit: 50ml Luminol/enhancer solution (A); 50ml Peroxide solution (B)

## COMETASSAY

**COMET assay** tanks are available in three slide formats to study single cell gel electrophoresis (SCGE), a technique made popular by drug toxicology and carcinogenesis studies for the detection and quantitation of DNA damage in cells.

Each tank's robust construction from ebony acrylic ensures that cells remain free of exposure to background light and DNA damage during electrophoresis, while a cooled central platform provides a convenient surface for slide preparation and control of slide temperature during the assay. Following electrophoresis, DNA damage may be measured using Comet Assay scoring software.

For COMET assay cooling we recommend the CSL-CHILLER. This CHILLER is ready assembled with the thermostat mounted on the refrigerator and supplied with insulated tubing and clips to form a system ready to use. A simple-to-use rotor dial plus two keys provide access to the interactive interface for fast, accurate set-up.

High specification Chiller

#### KEY FEATURES

Quantifying DNA damage and repair in drug development applications and Reproductive science.

- Overview: Following genotoxic insult, such as ionizing radiation, the resultant strand breakage of supercoiled duplex DNA reduces the size of the large genomic DNA from which these strands are separated or drawn out by electrophoresis. The genomic DNA then takes on the appearance of a 'comet' as its negatively charged broken ends and fragments migrate towards the anode during electrophoresis.
- Method: After exposure to a genotoxic insult cells are suspended within low melting point agarose and embedded within a thin layer of agarose on a microscope slide. Cellular protein is then removed by lysis in detergent, when DNA is allowed to unwind in alkaline conditions before electrophoresis. The DNA is electrophoresed, stained and then analysed using fluorescent microscopy and imaging software.

TECHNICAL S	TECHNICAL SPECIFICATIONS								
SLIDE CAPACITY	SLIDE CAPACITY 10 20 40								
Unit Dimensions (WXLXH)	17х34х9см	31х34х9см	33х59х9см						
VOLUME	550ml	1000ml	2100мL						

This Chilling Plate is custom designed and manufactured specifically for Comet Assay. The Chilling Plate can accommodate 26 Comet assay slides and assists in the Comet Assay process by allowing a rapid solidification of the low melting point agarose on the Comet Assay slides and facilitates easy retrieval of the slides once the agarose gels are solid.

CSL-COM40	Comet Assav Tank for 40 Slides					

### COMPAC-50

Developed in collaboration with the Oxidative Stress Group in the Department of Cancer Studies and Molecular Medicine within the University of Leicester, the COMPAC-50 is a high throughput electrophoresis system, to perform the Comet Assay using a patented vertical slide orientation design. This allows up to 50 slides to be run in a single tank, with a fraction of the footprint of traditional tanks.

The unique patented design employs two carriers to hold a total of 50 slides (25 per carrier) vertically. This provides two distinct advantages over conventional Comet Assay systems that utilise a horizontal platform for manual mounting of multiple individual slides. Firstly to produce a highly compact system which saves 75% of Lab space. Secondly by holding 25 slides in a rack this allows slides to be processed together in one batch saving on handling assay time by up to 90%. Consequently, this is not only beneficial for electrophoresis but also in the lysis, neutralisation, staining and washing steps of the Comet Assay, when each batch of slides may be treated during each step respectively using the ten ebony acrylic staining dishes supplied. In addition, the COMPAC-50 benefits from a high performance ceramic cooling base with sliding drawer to accommodate a cool pack, which is frozen before use, to maintain optimal buffer temperature.

KEY FEATURES

- Patented design used vertical slide orientation to increase throughput
- Slide carriers eliminate manual handling decreasing errors and assay time.
- Ten staining dishes supplied for batchtreatment of slides during the lysis, neutralisation, staining and washing steps
- Ebony acrylic construction ensures reduced exposure to background light and potential DNA damage
- Highly compact design optimises electrophoresis efficiency during Comet Assay
- Ebony acrylic construction ensures reduced exposure to background light and potential
- 50 slides may be run within 20 minutes using powerPRO300 power supply (page 62)

#### Typical Results

Repair of UVB-induced DNA damage in human keratinocytes, using enzyme-modified Comet assay. HaCaT cells were irradiated with 1 J/cm<sup>2</sup> UVB, then allowed to repair in fresh medium and DNA damage analysed at different time points (A) 0 h, (B) 1 h,(C) 6 h, (D) unirradiated (courtesy of Karbaschi, M. University of Leicester, Leicester, UK).

## CELOS Clinical

Cellulose acetate electrophoresis is an important technique in clinical diagnostics. The Cleaver Scientific range of cellulose acetate products offers a complete system solution for research and clinical cellulose acetate electrophoresis applications. CellasGEL includes both equipment and consumables to assist in the research and diagnosis of specific disease states.

The ideal tank for standard 'dry' membrane and 'wet' gel cellulose acetate techniques, the Cellas electrophoresis system is designed and built to our high quality standard to address both routine clinical and research requirements. Two adjustable supports, which can be positioned anywhere within the tank, readily accommodate different lengths of dry cellulose acetate membrane to a maximum 20cm.

#### KEY FEATURES

Qualitative identification and quantification of Hb variants. Finding abnormalities of Hb synthesis like sickle cell disorders, thalassaemias etc.

- Compact high resolution system for clinical electrophoresis
- Accommodates strips and gels up to 24x20cm
- Complete range of cellulose acetate gels and kits
- Densitometer software and scanner available

CellasGEL 'wet' cellulose acetate gel strips are ready to use and overcome many of limitations of traditional 'dry' cellulose acetate membranes.
CellasGEL's advantages over dry cellulose acetate membranes are as follows:

- 1. Wet state unlike dry membranes, CellasGEL is a cellulose acetate film produced in a wet form to facilitate buffer adsorption, but without the entrapment of air bubbles that inhibit electrophoresis
- 2. Greater thickness CellasGEL's greater thickness (190-500 $\mu$ m) compared to dry membranes (160-190 $\mu$ m) allows application of larger sample volumes to enhance detection of poor quality specimens low in protein content 3. High resolution samples may be applied to CellasGEL as wider but finer bands, without risk of diffusion, to make band quantitation more reproducible; this is further enhanced by extended migration distances (60-70mm) that improve band separation
- 4. Amphiphilic CellasGEL's lipophilic and hydrophilic properties make it the perfect separation medium for many different biological molecules, ranging from lipoproteins to haemoglobins. CellasGEL is supplied either as individual packs of 25 or 100 strips or within clinical test kits.

# CellasMEM'dry'

Although CellasGEL cellulose acetate gels have a number of advantages over traditional dry cellulose acetate membranes, many manual systems and modern robotic platforms still use dry cellulose acetate membranes, which are usually supported on a plastic backing. Consequently, CellasMEM, a range of dry cellulose acetate membranes supported on a Mylar film has been developed to address this demand.

Package deals provide a quick and convenient solution for those users wishing to perform the more popular Helena-type applications. The most

basic kit includes 25x76 and 60x76mm CellasMEM membranes, 8-sample micro applicator, and paper wicks, while the complete version also contains a Cellas tank and new NANO500 power supply.

Each CellasMEM dry cellulose acetate membrane is available in 25x76mm (MEM257650), 60x76mm (MEM607625) and 94x76mm (MEM947625) plate sizes, and is compatible with the manual and automated platforms of many leading and emerging brands within the clinical electrophoresis market, including: Helena Laboratories, Interlab and Seleo.

CellasMEM is supplied either as individual packs of 25 or 50 strips to perform manual assays for Serum Protein (Dysproteinaemia; Incipient Gammopathies) and Haemoglobin Analyses (Haemoglobinopathies such as Thalassaemias and Sickle Cell Disorders).

## CELOS Clinical

Although CellasGEL cellulose acetate gels have a number of advantages over traditional dry cellulose acetate membranes, many manual systems and modern robotic platforms still use dry cellulose acetate membranes, which are usually supported on a plastic backing. Consequently, CellasMEM, a range of dry cellulose acetate membranes supported on a Mylar film has been developed to address this demand.

Each CellasMEM dry cellulose acetate membrane is available in 25x76mm (MEM257650), 60x76mm (MEM607625) and 94x76mm (MEM947625) plate sizes, and is compatible with the manual and automated platforms of many leading and emerging brands within the clinical electrophoresis market, including: Helena Laboratories, Interlab and Seleo. CellasMEM is supplied either as individual packs of 25 or 50 strips to perform manual assays for Serum Protein (Dysproteinaemia; Incipient Gammopathies) and Haemoglobin Analyses (Haemoglobinopathies such as Thalassaemias and Sickle Cell Disorders).

#### **Applicators**

The CellasMEM MEMAPPM8 is an 8-sample micro applicator designed for use with 60x76mm (MEM607625) and 25x76mm (MEM257650)
CellasMEM dry plates. The applicator dispenses each sample deposit as a thin band 5mm wide that is equivalent to 0.25µl in volume; and may load either one 60x76mm strip or two 25x76mm strips (4 samples per strip) at a time. By loading each sample as a tighter, but finer, band over a wider front, the sample diffusion and saturation typical of standard syringe loading methods is significantly reduced, resulting in improved band quantitation. A MEMAPPS6 semi-micro applicator is also available to load 6 samples, each sample deposit 7mm wide and corresponding to 0.5L in volume.

#### **Bridges**

Adjustable bridges within the CELLAS tank render specialist bridges unnecessary. Both CELLAS bridges may be positioned either side of the central buffer partition within the tank to produce the 76mm gap necessary to support Helena-type membranes, while the 24cm width of the tank accommodates either three 60x76mm or six 25x76mm CellasMEM membranes per run. A dedicated bridge adaptor (MEMBA) is available for those users of different cellulose acetate electrophoresis tanks that do not have adjustable bridges.

#### **Paper Wicks**

Supplied in packs of 100 and available in 190x60mm and 220x40mm (WxL) sizes, CellasMEM disposable paper wicks may be used respectively with standard CellasMEM dry plates and CellasMEM dry plates for Helena applications. To set up the Cellas tank for use with dry plates, simply insert each paper wick lengthwise within the tank pre-filled with buffer, so that the buffer will become absorbed. Once absorbed, fold over the top of each wick to make a support bridge, ensuring the bottom edge of the wick is immersed within buffer and in contact with the bottom of the tank, while the top edge rests along the adjustable bridge. Repeat for the other bridge.

#### CellasMEM Membranes

CellasMEM membrane plates are available in many different sizes and quantities ranging from the market-leading Helena Titan 3 manual system to punched dry membrane plates compatible with the strip-holders of automated systems from Genio Interlab and SELEO. Also listed are CellasMEM membranes for older systems (some of which are obsolescent) that are still in use today.

#### **CellasMEM Package Deals**

Package deals provide a quick and convenient solution for those users wishing to perform the more popular Helena-type applications. The most basic kit includes 25x76 and 60x76mm CellasMEM membranes, 8-sample micro applicator, and paper wicks, while the complete version also contains a Cellas tank and new NANO500 power supply.

#### Using CellasGEL

- 1. Equilibrate a CellasGEL for 10 minutes in Electrophoresis buffer using an agitating platform (e.g. 3D Shaker, page 72)
- 2. Dry surplus buffer from the CellasGEL before securing it to a Bridge located within a preprepared Cellas tank
- 3. Apply samples to the CellasGEL using the appropriate Applicator, and electrophorese at 200V for 30-9 secs (see Power Supplies, Page 60)
- 4. Remove the CellasGEL from the tank, and use the required Clinical Test Kit for staining and destaining and clearing
- 5. Place the CellasGEL on a suitably sized mylar sheet or glass plate and dry in an oven for 10 minutes at 80°C (e.g. NHYBRIDBASIC, page 74)
- 6. Quantify bands using Scanner and Densitometer Software

## omnipage Isoelectric Focusing

Equipped with rehydration and focusing trays, the Cleaver Scientific IEF system has been optimised to perform first-dimension isoelectric focusing (IEF) with IPG (immobilised pH gradient) strips quickly, easily and reproducibly. It can also be used with precast IEF Gels.

An ideal entry-level system for both experienced and occasional IEF users, the unit is versatile enough to meet the needs of laboratories with increased throughput requirements as well as first time users.

#### **HIGH CAPACITY**

Its high-capacity focusing tray accommodates up to twelve IPG strips. Adjustable 'pick-and-place' electrodes clip conveniently anywhere within the focusing tray to resolve IPG strips 7-24cm in length and are colour-coded to prevent polarity reversal. The Electrode frame clips directly on to the cooling plate and includes adjustable electrodes to run horizontal precast IEF and PAGE gels.

A cooling plate, manufactured from a special grade ceramic in a large 26x26cm surface area, facilitates effective heat dissipation and control, particularly during high voltage IEF techniques. An optional, but recommended, recirculating chiller connects quickly and easily to the cooling plate to maintain optimal operating temperatures for IPG strips and precast gels.

#### **REHYDRATION**

The Rehydration tray allows convenient transfer of IPG strips to the focusing tray without time-consuming removal of residual rehydration buffer and also enables the focusing tray to remain permanently in use for IEF to maximise throughput and provides useful storage at -20°C for focused strips before second-dimension runs.

For those requiring a power supply, the Consort EV2320, 3000V, 150mA, 150W enables desired Volt-hours for focusing to be attained faster at maximum voltage.

Tray Specifications	IPG Strip Length					
may specifications	7cm	11cm	18cm	24cm		
Focusing Tray						
Electrode Distance	6.5cm	10.2cm	17.1cm	22.7cm

## PAGE Large Format

Ideal for a variety of large format vertical gel applications, these Large Format vertical gel systems offer advanced features for enhancing gel resolution and ease of use, essential when handling gels of this size.

Each unit contains ultra-soft silicone seals for easy plate sealing and trouble-free runs, even over extended run times. Resolution is enhanced by using an aluminium heat sink plate, essential for even sample migration. Added convenience is provided by a removable lower buffer tank and upper buffer drainage tap.

Special buffer chambers allow either low buffer volumes to be used for economy or high buffer volumes to be used for extended runs.

A wide range of interchangeable comb and spacer options allows many techniques to be easily accomplished including; DNA Sequencing, 2-D analysis, Microsatellite analysis, DNA fingerprinting, Gel shift assays, Single-Strand Conformation Polymorphism (SSCP), Heteroduplex and Oligonucleotide analysis.

#### KEY FEATURES

- Run up to 96 samples
- Enhanced gel heat homogenisation
- Variable low or high buffer volumes
- 20 x 50cm or 33 x 45cm formats

These sturdy racks are designed for safe drying and storage of glass plates. The small rack can hold up to 20x 2mm thick plates

## Omnipage Denaturing Gradient

The VS20WAVE-DGGE is a complete system for DNA mutation analysis. Using the innovative vertical screw-clamp technology of the VS20-WAVE system, the VS20WAVE-DGGE is fully equipped – with temperature control unit, stirrer, gradient mixer and casting accessories – to perform specific mutation analysis applications.

The powerful microprocessor-controlled PID temperature control unit enables various mutation detection techniques to be undertaken between ambient temperature and 70°C, while the simple four-screw design of the WAVE insert accelerates set up of denaturing PAGE gels.

The VS20-DGGE can be used to screen single-base pair changes in the following applications:

• Parallel Denaturing Gradient Gel Electrophoresis (DGGE)

Constant Denaturing Gradient Gel Electrophoresis (CDGE)

A maximum 96-sample throughput allows detection of as many mutations within a couple hours, alleviating many of the bottlenecks associated with screening for DNA mutations.

The GM100 gradient mixer is supplied as standard to ensure efficient gradient formation by mixing and delivering high- and low-density denaturant solutions. The MU-D01 peristaltic pump is also recommended for delivery of linear and reproducible gradient gels.

- Maximum 96-sample throughput
- Four-screw vertical clamping technology accelerates set up
- Large format 20x20cm glass plates for improved resolution
- 100ml gradient mixer, with valvecontrolled 50ml reservoir and mixing chambers, makes two 1mm parallel denaturing gradient gels
- Microprocessor-controlled temperature control unit accurate to ±0.02°C

#### **Innovative Casting and Set-up Mechanism**

The VS20WAVE-DGGE utilises novel vertical screw clamp technology to assemble two vertical gels. This reduces the number of screws required for set up making casting assembly faster, while a built-in inner buffer chamber within the PAGE insert allows set-up to be completed without the inclusion of heavy top tanks or buffer chambers. A dual purpose PAGE insert eliminates the need for plate transfer, and is used with a cam casting base to guarantee efficient leak free casting.

#### **Precise thermal control**

The redesigned VS20DGGE-TC temperature control unit combines buffer recirculation with a heat sensor and 1.4 kW heating element to facilitate precise temperature control to within  $\pm 0.02^{\circ} C$ , allowing the gel temperature to be set to the melting temperature (Tm) of the amplified DNA polymorphism or mutation of interest. Other benefits include: a conspicuous 4-digit 16mm LED panel to aid set-up; precise tuning to within  $0.1^{\circ} C$  resolution; an operating set point, plus three adjustable pre-set temperature values; and stirred buffer circulation for temperature stability and uniformity.

#### Programmable power supply option

At 500V, 800mA and 300W outputs, the optional powerPR0500 power supply provides full flexibility for different mutation detection techniques.

TotalLab 1D / CLIQS - Multiplex Analysis

CLIQS 1D Pro is more advanced analysis software used primarily for bandpattern matching within individual DGGE, SSCP and RFLP gels that are important for cultivar experiments, evolutionary biology and population genetics. CLIQS 1D Pro has a powerful band matching feature, which is flexible and easy to use, while visual tools show the results of matching and identify similarities within an individual gel, including lane clustering via dendrograms. More info on our software range can be found on our website.

Whether you require a power supply for routine horizontal DNA agarose gel electrophoresis or techniques as technically demanding as SSCP analysis within a large format vertical, or first dimension IEF using IPG strips, Cleaver Scientific can meet your requirements with its comprehensive range of power supplies. Each power supply benefits from a small footprint area and compact design, while self-explanatory prompting menus facilitate easy set-up. Furthermore, these power supplies adhere to IEC 61010 – one of the world's most stringent electrical safety standards.

The PowerPro series of power supplies is a versatile range designed to power both multiSUB horizontal and omniPAGE vertical electrophoresis tanks.

Each power supply has a 2.4" LCD display showing the available options as well as current running conditions. Constant voltage, current and power options are available as well as pre-programmed or customer programmed conditions allowing users to save and repeat their experiments for exceptional reproducibility. The 5 power outlet pairs mean less power supplies are needed for the same number of tanks, saving cost and time when running multiple tanks simultaneously.

PowerPro 300 is perfect for our smaller tanks and can run up to 5 multiSUB MIDI units or omniPAGE Mini's. For Higher voltage runs the PowerPro500 offers a maximum 500V output, perfect for the larger horizontal and vertical units. For blotting, where high current can be required, the PowerPro3AMP supplies a maximum 3000mA to allow multiple blots to process simultaneously.

- Routine horizontal electrophoresis using multiSUB Mini, Midi and Choice.
- Vertical Electrophoresis using omniPAGE Mini.

### nanoPAC Mini

The new and improved nanoPAC Mini Power supply series comprises ultra-compact and economical units ideal for use with DNA/RNA (Horizontal) and protein (vertical) electrophoresis systems.

A simple two step feature which allows users to set a programmable change in voltage/current/time during the run provides increased versatility. Simply press MODE and program STEP 1 and STEP2 to the desired setting and then start and the nanoPAC will automatically run the steps in sequence.

With enhanced features, such as a maximum constant voltage up to 300 or 500V and maximum constant current output of 400mA they are capable of running all horizontal multiSUB $^{\text{TM}}$  systems and vertical omniPAGE $^{\text{TM}}$  mini. The nanoPAC-500 is also capable of running the VS10W & VS20WAVE vertical units, as well as

horizontal and vertical gel tanks from other manufacturers, These can be set on a continuous run or timed setting up to 999 minutes. The nanoPAC's user-friendly interface is easily adjustable in 1V and 1mA increments, making it perfect for separations where precise settings are required. Two pairs of parallel power terminals, allows two electrophoresis units to be run simultaneously, saving time.

#### KEY FEATURES

- Ultra compact size saves bench space
- Enhanced in-built safety features
- Conspicuous 3-digit LED
- Alarm function
- Wipe-clean polycarbonate housing

### Consort

All Consort Maxi Series (EV2xxx/EV3xxx) power supplies have four output terminals for up to four simultaneous runs. Powerful microprocessor control allows complex programming, while manual mode permits the setting of voltage, current, power and time for routine electrophoretic runs. The parameters may also be changed temporarily without interrupting the run.

#### EV2000 series -

is a high-end mid-power range suitable for most applications such as larger tanks or multiple smaller tanks. A robust 150W power supply in a small housing and designed to be easy to use.

#### EV3000 series -

This high-power, high-end power supply series has five versions. The 3000V and 6000V version have a special low current mode for IEF applications.

small housing and designed to be easy to use.

- Constant voltage, current or power
- Automatic crossover
- Overload Protection
- Short Circuit Protection

## omnidec Gel Documentation

The omniDOC systems offer high performance gel documentation and analysis at affordable costs.

By providing many of the features incorporated within the highest specification systems, but without the added price premium, the omniDOC system presents a simple but sophisticated imaging solution. A high resolution 5 mega pixel CMOS sensor with slide-out UV transilluminator, and optional blue epiillumination module and white light table, makes the omniDOC suitable for imaging most fluorescent and colorimetric gels. Imaging applications

are made easy by a pre-focused camera that requires little or no manual adjustment, while simple image acquisition and analysis software guides the user through every step of the gel documentation process. A front filter and spring-loaded cover facilitates safe and convenient gel inspection. omniDOCs are constructed from corrosion resistant ABS for superior durability.

- Pre-focused 5 mega pixel camera with auto-exposure for almost instantaneous high resolution gel imaging
- 6mm lens, F1.2 aperture size, with manual adjustment
- Interchangeable filter 620nm ethidium bromide filter as standard; 520, 560 and 580nm filter options for runSAFE, SYBR stain and other fluorescence applications
- Internal white LED helps gel positioning and focusing
- Slide-out 312nm transilluminator
- Large 21x26cm imaging area

- 620nm filter (standard) EtBr, Gel Red & SafeView Classic
- 520nm filter (SYBR) Gel Green, Midori Green, run- SAFE, SYBR Green I & II, SYBR Gold & SYBR Safe
- 560nm filter (yellow) as per 520nm filter but also including SYPRO Orange
- 580nm filter (orange) EtBr, Gel Green & Red, Safe- View Classic; SYBR Green I & II, SYBR Gold & Safe; SYPRO Orange & Ruby

DNA – use the slide-out UV transilluminator to capture images of DNA gels stained with EtBr and SYBR dyes

Blue light – LED epiillumination module allows visualisation of some stains with better clarity and without DNA damage – e.g. runSAFE

White light table – use plug- in white light table to view coomassie blue and silver stain protein gels; may also be used to view tissue slides and autoradiographs

Autoradiographs – high resolution 5MP camera captures images in high detail, especially when scrutinising separation between closely located bands or spots

### Chemiluminescence Documentation Systems

Cleaver Scientific supplies a range of chemiluminescence documentation systems for both chemi and fluorescence imaging. All systems include intuitive acquisition and analysis

software to make capturing and analysing gels as easy as possible. To see the latest range, visit the Cleaver Scientific website here: or contact our sales team at sales@cleaverscientific.com.

OMNIDOC IMAGE CAPTURE AND ANA	LYSIS SOFTWARE - USE THE INCLUDED SOFTWARE TO
Acquire, store and manipulate images	Analyse, document and quantify gels
Adjust the exposure time, altering the UV intensity or manipulating the iris on the camera if required	Load the newly acquired image, or select one stored previously in TIFF, JPEG, BMP or GIF image format
Select your light source: UV, blue or white light	Select the gel or dot blot type from one of four options
Use Toolbox function to change default settings for excitation source & exposure time, or apply advanced features like saturation detection & date stamp	'Tap and drag' rectangular boxes on your tablet to define the sample lanes to be analysed
Image Freeze – minimise UV damage nucleic acid gels by 'freezing' the gel image and switching off the transilluminator ahead of image capture or printing	Perform density analysis
Acquire and save image	Export into Microsoft Excel as a CSV file for further data analysis

#### KEY FEATURES

- 18 mega pixel digital camera\*
- Image visualised within a large 8"TFT colour monitor
- Light weight compact hood with easy access door and built-in inner lights
- Integral microswitch switches off UV Transilluminator and turns on internal light
- Can be used without a computer
- Includes flash card, flash card reader and ethidium bromide filter
- Available on its own with camera and darkroom, or as a complete gel documentation system with transilluminator, either with or without software

microDOC is a simple, inexpensive and ultra compact gel documentation system. It includes a digital camera with CCD sensor and the latest image processor to guarantee superb resolution of 18 mega pixels\*. For added convenience, limited space and budget requirements, microDOC can be used computer free.

The image is viewed from a large 8" TFT colour liquid crystal display. A variety of images can be captured in colour, clearly and easily, from agarose and other fluorescent gels, colorimetric gels, auto radiography film and blotting membranes. The system is fitted with an ethicium bromide filter and has a safety switch to turn off the UV Transilluminator when the door is opened. This also activates internal light for convenient gel manipulation.

CLIQS gel analysis software options are available for quantitative gel analysis following gel documentation. Each software option offers the highest level of automation currently available and guides the user step by step through the analysis process.

A user-friendly interface is split into four parts allowing the user to view within a single screen every aspect of gel quantitation, including the gel image, lane and band profiles, analysis data and the help menu. CLIQS gel quantitation is suitable for all users regardless of their experience. More advanced CLIQS 1D PRO software is recommended for researchers performing indepth lane relationship studies.

SpotQuest is software with basic functionality and easy to use 10-step workflow. It makes it easy for small laboratories and novice users to apply 2D gel electrophoresis as part of molecular biology or biochemistry research. It gives you a quick, simple, objective way to detect and measure changes in protein samples using 2D gel image analysis.

for more information on CLIOS analysis software

CLIQS is the software supplied exclusively with all microDOC1D models.

CLIQS features a user-friendly interface and help menu that provide a simple, guided workflow for fast and accurate quantitation and calibration of 1D gels and western blots. Main benefits include:

- The capacity to review each step within the automated workflow analysis, and manually intervene or edit if desired
- Highly developed algorithms which accurately detect lanes and bands even on distorted gel images
- A range of visualisation tools that facilitate further examination of lane and band data to verify results, including band calibration from Molecular Size standard lanes and accurate quantitation derived from known band volumes.

CLIQS includes a 1D module plus three modules for array analysis; colony counting and 2D spot measurement and general feature-based image analysis. The array analysis module can automatically detect up to 1536 wells or arrays spots and may also be used to quantify dot and slot blots. Array analysis and Toolbox modules also include multiplex analysis functionalities.

CLIQS - Array Analysis

TotalLab 1D / CLIQS - Multiplex Analysis

CLIQS 1D Pro is more advanced analysis software used primarily for band-pattern matching within individual DGGE, SSCP and RFLP gels that are important for cultivar experiments, evolutionary biology and population genetics. CLIQS 1D Pro has a powerful band matching feature, which is flexible and easy to use, while visual tools show the results of matching and identify similarities within an individual gel, including lane clustering via dendrograms. More info on our software range can be found on our website.

## safeVIEW MIni-2

## The advanced SafeVIEW-MINI2 offers a safe way to view and document gel samples.

With a compact design, this transilluminator serves as the perfect workstation for viewing and working with fluorescently-stained nucleic acid gels. The blue light source has the added advantage that it does not cause damage to DNA or RNA that would normally be associated with UV light. A separate 580nm amber

filter screen and a thinner lightweight casing combined with an imaging size of 153 x 153mm means it can be used to view small to medium sized gels and is compatible with multiSUB mini, midi and choice Horizontal DNA gel tanks. safeVIEW-MINI2 can also be used with our GDH-BASIC imaging hood to reduce background light letting you capture gel images with your mobile phone camera.

(without filter in place)

KEY FEATURES

- Thinner and more lightweight body
- Easy to carry in between labs
- Aluminium alloy casing design
- Excellent heat dispersion
- Fnergy saving
- 470nm harmless blue light for direct human contact

GDH Basic Hood (with optional safeVIEW-MINI2

GDH-BASICKIT (phone not included)

TECHNICAL SPECIFIC	ATIONS
Dimensions (WxLxH)	20x20x1.39cm
Viewing Area	15.3 x 15. cm
Blue Light Source	15W
Illuminator Base Design	flat bed
Blue Light Wavelength	470nm
Automatic Shutdown	approximately 6 min
Material	aluminium alloy
Power Rating	DC 12V, 2A
Weight	approximately 760g

## **Z** runVIEW MINI

#### A mini blue light illuminator that fits right under your gel tank.

The runVIEW MINI uses harmless blue light to illuminate both traditional Ethidium bromide stained gels as well as new generation safe stains such as runSAFE. Slotting under any gel tank, but perfect for our MINI and MIDI sized multiSUB gel tanks.

The system comes with an orange filter window to visualise DNA in real time within your gel tank, prefect for quickly checking PCR fidelity and restriction digest results.

The system can also be used as a stand-alone transilluminator with the gel placed direction on the illuminator.

#### KEY FEATURES

- High intensity blue LED illuminator allows visualisation of a wide range of fluorescent gel stains
- Slots easily under multiSUB MINI and MIDI sized tanks for instant DNA visualisation
- Base illumination provide excellent uniformity
- Compatible with runSAFE, commercial safe stains and ethidium bromide

MIDISYS RVMINI-LID

## **Z** proBLUEVIEW

Dual colour transilluminator, featuring white light illuminator for colorimetric gel imaging and blue LED illuminator for fluorescent stains.

The proBLUEVIEW mini transilluminator makes bulky UV and White light tables a thing of the past.

Featuring powerful LED lighting arrays for both blue (470 nm) and white (broad wavelength) illumination and a much smaller footprint compared to transitional UV transilluminators, the proBLUEVIEW is the perfect tool for imaging a whole range of electrophoresis gels, allowing you to save on bench space. The LED lights mean that UV bulb ageing is no longer an issue and the inbuilt

white LED array means separate white light tables are no longer necessary.

The proBLUEVIEW is perfect for teaching

labs in universities and schools where space is limited and multifunctional equipment is ideal. proBLUEVIEW is compatible with blue light excited safe DNA

stains, as well as traditional stains such as ethidium bromide

#### KEY FEATURES

- Dual Blue and White light source to image fluorescent and colorimetric gels
- Magnetic filter compatible with wide range of DNA stains
- 3 level adjustable LED intensity
- High Quality Aluminium housing
- Automatic power-off to prevent heat build- up
- Bottom up illumination provides even sample illuminator

Supplied with a flatpack hood Use your phone to capture an image

TECHNICAL SPECIFICATI	ONS

Emission maxima ( nm )	470 nm
Automatic Power-Off	5 mins
Filter Type	amber filter (580nm)
Certifications	CE/ETL

#### safeVIEW

The safeVIEW Blue LED transilluminator offers a safe way to view and document samples. This light source also has the added advantage that it does not cause damage to DNA or RNA that would normally be associated with UV light. The system uses Blue LED light to excite both traditional dyes such as Ethidium Bromide as well as safe stains such as runSAFE.

#### KEY FEATURES

- No DNA damage to samples
- Safer for user No UV light
- High Purity LED light
- Strong Metal enclosure with stainless steel filter frame
- Fast start up

## **Z** UV Transilluminators

EZEE UV Transilluminators offer an ultra-violet light source for the analysis of fluorescently stained electrophoresis gels.

These also offer space to place tube racks, cutting tools or waste agarose gel, ideal when there is a need to cut gel bands. Each single wavelength model includes a High Low intensity switch. A new and high quality starter ensures that the UV tubes energise immediately and without flickering. This feature extends the life of the tubes. Two Dual wavelength models offer added flexibility and convenience.

The white light box allows imaging of non-fluorescent stained media, to allow a wider range of applications. Viewing Area: 210 x 297mm

#### KEY FEATURES

- Three Wavelength options: 254 / 312 / 365 nm
- Two Dual wavelength models
- High efficiency reflector
- Hi / Lo intensity switch

#### **DuoView**

duoVIEW combines UV and Blue light illumination, allowing a wide range of fluorescent DNA stains to be visualised. 470nm Blue LEDs combined with an orange filter allow the imaging of new generation "Safe" stains such as runSAFE, whereas UV illumination and filters allow traditional stains such as Ethidium Bromide.

- UV & Blue light technology in one transilluminator
- Single or dual wavelength models available

With a drying area of 21 x 31cm, Midi Gel Dryer can dry six 10 x 10cm gels or a single larger gel. Maxi Gel Dryer with a 35 x 45cm drying area can dry twelve 10 x 10cm mini gels simultaneously.

Both unit's microprocessor controls temperature and time, each parameter being displayed on its own LED display. The gels are heated from the base plate while the vacuum removes the moisture from below to dry the gel homogeneously. These dryers feature optimal sealing using a silicone rubber cover and supporting mask. When applying the vacuum, a groove that frames the drying surface provides an optimal tight seal during the drying.

Gel Dryer Pump is a quiet, low maintenance oil free vacuum pump

#### KFY FFATURES

- Dry up to twelve 10 x 10cm gels at a time [maxi]
- Microprocessor controls temperature and timer
- Optimal tight seal during the drying process
- Pump; Oil-free vacuum down to ~ 9mbar ultimate vacuum
- Pump: outstanding chemical resistance and superior vapour tolerance

#### **UV** Crosslinkers

The UVlink UV crosslinker is especially designed for binding nucleic acids to membranes. A membrane keypad facilitates manual or preset control of the desired UV dosage and exposure time, while a highly accurate microprocessor-controlled photo-feedback system maintains uniform output from each of the crosslinker's five 8-Watt UV bulbs. Other features comprise safety interlock switches to prevent accidental UV leakage during operation, a clearly visible LED,

plus a large interior chamber and small footprint area. The crosslinker may be used in a variety of applications, such as colony or plaque lifts, UV sterilisation and gene mapping or DNA damage studies.

- Programmable microprocessor control
- Automatic monitoring of UV energy
- Conspicuous front panel LED, with non-UV transmissible front door connected to safety interlock switches

### rockers and shakers

Four different models of rockers and shakers are available, with each offering benefits that include: outstanding uniform motion and low noise; microprocessor based keypads with digital control and display of preset time, continuous time, action scale and speed; and high quality stainless steel platforms with pop-on / pop-off installation holes to secure samples.

All models are lightweight and portable for easy transportation from the bench to incubator and cold room alike, while additional platforms may be added for increased capacity.

#### KEY FEATURES

- Orbital, reciprocal & rocking models with 30x30cm shaking-platform & non-slip rubber mat
- 2-D/3-D shaker accommodates optional hybridisation water bath
- Additional platforms double capacity
- Dimpled mat supports 1.5ml, 15ml and 50ml tubes

#### Blot Boxes

These gel staining / blotting boxes are available in 4 sizes and are the ideal accessory for incubating blots or staining gels.

#### 3D shaker

MiniMix combines the motions of orbital shaking and rocking to produce a gentle, but thorough, 3-D action that is perfect for antibody incubation of western blots and staining gels. This allows users to work with minimal volumes, thus conserving valuable probes and antibodies. The MiniMix's compact and light weight design allows it to be moved around the lab where needed.

## vortex mixer

This variable speed Vortex Mixer combines fast, efficient mixing with minimal vibration. Unlike other vortex mixers using elliptical orbits, its true circular orbit facilitates uniform sample-vortexing even at low speed.

The Vortex head accepts many different tube sizes, while optional heads for microplates, microtubes, PCR strip tubes, 15ml and 50ml tubes and blood vials are available. The unit may be used in 'touch' or continuous mode: 'touch' mode being activated by simply depressing the sample head and then stopped by releasing the pressure. An optimised counter balance system minimises vibration and movement of the unit during operation, whereas its lightweight construction and small footprint allows it to be readily transported and used in areas where space is restricted.

#### KEY FEATURES

- Powerful, reliable motor with optimised counter balance
- Circular orbit for effective vortexing at any speed
- CombiCup head accepts a variety of tube sizes
- Versatile head attachment accessories for microplates and different tube sizes

With a durable and chemically resistant ceramic surface, Cleaver Scientific's digital hotplate, stirrer and hotplate stirrer are the ideal solution for demanding users in all laboratory environments. The minimal footprint (18 x 26 cm) allows for use in crowded spaces such as fume hoods while the 16.5 cm square plate makes these units compatible with a wide range of commonly used vessels such as beakers, bottle and conical flasks. Fast and precise adjustment of speed and temperature is achieved with advanced microprocessor technology, and a large backlit LCD display offers easy viewing of current parameters. A safety LED indicates temperatures over 50°C. An optional external thermometer and support rod allows temperature control of the sample by direct feedback to the microprocessor, maintaining temperature to within ±0.5°C.

# heaters and stirrers

# hybridisation shaking incubators

With a compact, space-saving stackable design and temperature uniformity to within  $\pm 0.2$ °C, the hybridPRO hybridisation shaking incubators can be used for numerous temperature-dependent laboratory applications.

In addition to the standard entry level model, the hybridPRO range includes four incubator models, each supplied in one of four shaking platform formats – vortex, orbital, reciprocal or rocking - and customisable for nucleic acid hybridisation techniques with three rotisserie options. A large 3.6" colour-touchscreen control panel simplifies manipulation of speed, temperature and time within an easy to programme 3-line display, while a 32-bit microprocessor provides the temperature uniformity and stability necessary to support the most temperature-sensitive applications.

#### KEY FEATURES

- Digital microprocessor control
- Touch screen & graphical interface
- Chamber temperature: ambient to 85°C
- Temperature Resolution ±0.1°C
- Chamber temperature accuracy at 37°C ±0.2°C

Basic Incubator model with two stainless steel mesh-shelves

3-line colour touchscreen control.

Typical Applications:

- · Drying agar plates
- Microbial plating techniques

With Vortex, Reciprocal or orbiatl platform
Three rotisserie options for hybridisation
Typical Applications:
• Enzyme assays
• Nucleic acid hybridisation

NHYBRID is a cost-effective system for homogeneous temperature control during routine incubations. Advanced ventilation design technology controlled by a digital microprocessor maintains temperature uniformity and stability to within ±0.2°C.

A stain-resistant interior protects against spillages, while removable stainless steel mesh-shelves ensure that airflow remains unrestricted. Incubations may be set in precise 0.1°C increments under a continuous or programmable timer function.

# mini fixed volume pipettes

The Cleaver Scientific Mini Fixed Volume pipettes offer a simple low cost liquid handing solution.

Ideal for use in teaching and education institutes but can also be used in general laboratories where the application does not require such tight tolerances of the liquid to be dispensed.

Each model of pipette is the optimum size, just 130 mm in length to provide maximum user comfort over extended periods pipetting. The tip cone is unique being designed to accept both regular 200  $\mu l$  tips or ultra micro tips up to 20  $\mu l$ . The use of ultra micro tips for volume up to 20  $\mu l$  enhances the accuracy and precision very significantly.

#### Completely autoclavable

All models are fully autoclavable at 121°C/0.1 MPa/20 min.

- Easy operation for right- and left-handed users
- Low pipetting forces
- Highly durable shaft
- No adjustment required
- No calibration required

## omniPET

omniPET-M is a motorised powered pipette filler with LCD display designed for cordless work with 0.5-100ml glass or plastic pipettes. Its lightweight handle, together with smooth pushbuttons and switches ensure effortless pipetting even during extensive use.

Different operational modes may be selected depending on pipetting volume and viscosity of liquid. Liquid aspiration speeds can be adjusted to HIGH or LOW while dispensing can be by gravity (GRAV) or supported by the pump (BLOW) which empties the pipette with blow out. To protect the unit against overfilling, omniPET-M is equipped

unit against overfilling, omr

with both PTFE filters and a safety valve. To protect samples from cross contamination, filters and pipette holders can be easily exchanged and autoclaved.

The powerful re-chareable Ni-MH battery allows many hours of continuous work with the LCD display indicating when unit should be recharged. The battery is protected against overcharging by timing and thermal systems. omniPET-M is supplied with a charging stand.

## KEY FEATURES

- Suitable for 0.5ml to 100ml pipettes
- Ergonomically shaped handle
- Sensitive valves for precise work with low volume pipettes low battery light indicator
- Protected by filter and safety valve
- Autoclavable nosepiece and pipette holder charging stand

# OMNİPETTE single and multi-channel pipettes

Ergonomically designed OMNIPETTE pipettes combine a slim handle, high accuracy and precision rates and robust structure, at very competitive prices.

Constructed from durable PP/PVDF they are noticeably lighter in weight than many competitive models and so are more comfortable to hold and operate for extended periods - even in the smallest hand. This feature will also reduce the incidence of operator fatigue and Repetitive Strain Injury.

A continuously adjustable volumeter with digital readout allows simple and accurate dispensing. The robust construction along with the low thermal coefficient of the body of each pipette will prevent hand heat affecting sample measurements and reproducibility, even in prolonged usage.

#### Completely autoclavable

For sensitive laboratory applications, all omniPETTE models are fully autoclavable at 121°C/0.1 MPa/20 min. Unlike many other "autoclavable" pipettes, omniPETTE require minimal accuracy checks and/or recalibration

Using a series of height adapters, the tip ejector position on the shaft is adjustable to allow the pipette's use with virtually all brands of tips.

Eight models of single channel omniPETTE cover all volumes from 0.1µl up to 10ml. omniPETTE requires minimal maintenance. Its precise, self-locking stainless steel micrometer accurately adjusts the stroke of the polished, acid-resistant piston\*.

Each pipette has its own unique serial number etched into the body and is supplied with its own individual certificate of calibration, as a guarantee of the unit's quality.

## Single channel

omniPETTE's pipetting mechanism allows precise and effortless setting of pipette volume. Winding the counter from min to max volume can be performed rapidly with one hand.

#### **Height adapters**

Using a series of height adapters, the tip ejector position on the shaft is adjustable to allow the pipette's use with virtually all brands of tips.

Eight models of single channel omniPETTE cover all volumes from 0.1µl up to 10ml.

## Multi channel

omniPETTE Multi-Channel Pipettes are available in 8 and 12 channel models. Four overlapping volume ranges are provided to precisely meet liquid handling requirements from 0.5 to 300µl. The performance of every pipette is checked by gravimetric method and the results of test are printed in pipette Quality Control Certificate.

For comfortable pipetting in any direction, the tip manifold rotates 360°.

#### Suspension system

Each model features a revolutionary suspension system which allows the shafts to move independently and so retract slightly when they are pressed against a row of pipette tips. This ensures that all tips are secured on their individual shaft with the minimum of effort - and never fall off! In addition, an innovative ejector bar is curved, allowing the tips to be pushed off in steps, therefore reducing the amount of force required for ejection.

#### Individual piston assembly

Each channel of the pipette has an individual, precision piston assembly to ensure accuracy and reproducibility from one pipetting series to the next, as well as between channels. The micrometer is continuously adjustable for selection of whole or fractional volumes.

# quickspin microcentrifuge

Quickspin is perfect for microfiltration and rapid spin-down of sample from the walls and caps of microcentrifuge tubes.

Occupying less than 6 inches square of bench space, the Quickspin has a very small footprint, making it easy to use in the lab. Rotors and adaptors, are supplied as standard to accommodate 1.5 ml, 0.5 ml and 0.4 ml tubes, as well as 0.2 ml strips and tubes. A highly durable stainless steel hinge pin facilitates easy opening of the translucent lid, while an on/off switch is located on the side of the centrifuge to start and stop operation.

Alternatively, with the switch in the 'on' position, the centrifuge can be started and stopped by closing and opening the lid.

#### KFY FFATURES

- Supplied with both sdtandard microtube and striptube rotors
- Ideal for quick spin-downs and microfiltration
- Starts and stops in seconds
- Compact design

# multifuge minicentrifuge

Unlike traditional mini centrifuges, the multiFuge eliminates the need to change rotors when switching between microtubes and PCR strips.

The included, unique COMBI-Rotor is all that is required for running 12 microtubes and 4 PCR strips simultaneously.

With a fixed speed that produces 2,000 x g, this centrifuge is perfect for quick spin downs. Simply close the lid and the unit quickly ramps up to 5500 rpm. Open the lid, and the rotor quickly decelerates for removal of samples.

At just 14cm wide and less than 11cm high, the multiFuge truly is a personal centrifuge with unmatched capacity and flexibility.

Unique COMBI-Rotor

Compact, low profile design

- COMBI-Rotor for tubes and strips
- Twice the capacity of traditional mini centrifuges
- Nearly silent operation
- Starts and stops with opening/closing of the lid

# multispin refrigerated centrifuge

Built for long life, multiSPIN benchtop centrifuges have strong construction yet, offer a sleek contemporary design that will fit into any modern laboratory.

multiSPIN is packed full of features to make researchers' centrifugation procedures that little bit simpler. Its bright blue LED display ensures that run parameters are easily read from anywhere in the lab. Four different rotors provide exceptional flexibility, allowing its use with PCR/microcentrifuge tubes of 0.2ml, 0.4ml, 0.5ml, 1.5ml, 2.0ml, 2.2ml capacity; Haematocrit Capillary as well as popular 15ml and 50ml centrifuge tubes. The unit's rotor recognition provides safe selection of rotors.

Utilising a high quality brushless motor and its proprietory air-flow design, multiSPIN is quiet (<60db), cool & reliable. Its rust-free stainless steel bowl is extra thick and easy to clean. The unit features flexible programming including 10 acceleration rates & 10 deceleration rates plus a Timer 0-99 minutes & Hold in 30 second increments. Its 10 program memory allows multiple users to set up and easily access their individual run parameters. Speed can be accurately set in rpm or rcf (G) in 10 rpm increments, while a Pulse feature enables short runs for fast pelleting.

- Multiple rotors offers greater flexibility one centrifuge for multiple tube sizes
- 0.2, 0.4, 0.5, 1.5, 2.0, 2.2ml & PCR strips
- Haematocrit capillary and 2.0ml tubes
- Fixed angle 15 & 50ml tubes
- Swing out 8 to 15ml tubes
- Extremely quiet <60db (rotor dependent)</li>
- Proprietory air-flow design for cooler running
- Rotor recognition for safe selection
- Multi point lid locking for complete lid safety
- 3 year warranty as standard no compromise on component quality, reliability is guaranteed

Hi-visibility display and intuitive parameter entry

# CUBE digital dry baths

CUBE digital dry baths are available in single and dual block models, and have a comprehensive range of interchangeable blocks.

Each digital dry bath is compact and easy-to-use. The quick-change blocks have rapid heat-up times and reproducible temperature uniformity and accuracy, and may be used in a variety of applications, which include: restriction digestion, coagulation studies, hybridisation, Hot Start PCR® reactions and DNA denaturation. Due to the Solid Aluminium block holder, each Cube dry bath may also be adapted as a mini water bath incubator if desired. Both dry baths incorporate a digital microprocessor controller

for accurate temperature control in 0.1°C increments from ambient +5°C to 150°C. Rapid and easy programming is facilitated by the easy to use arrow keys on the sloped front panel, while both the temperature and running time are shown simultaneously on the dual digital LCD display.

## KEY FEATURES

- Microprocessor control with digital performance for precise, accurate control
- Wide temperature control range with excellent uniformity
- Rapid temperature increase rate
- LCD screen showing timer and temperature simultaneously
- User temperature calibration

## microBLOCK

Benchtop control of sample temperature has never been this easy or economical.

The microBlock fits almost anywhere and can even be used "on-the-go" in cars, boats or wherever a 12 volt power source is available. Its simple touch pad control with digital display is designed for "set and walk away" temperature selection and unrivaled accuracy. At less than 10.5cm. wide, microBlock is truly the first personal block incubator.

#### KEY FEATURES

- Compact, fits in the palm of your hand
- Exchangeable blocks, for 0.2 to 50 ml tubes
- Digital temperature control
- Clear cover improves temperature uniformity

# peristaltic pumps

This versatile peristaltic pump is an ideal accessory for gradient gel formation with the VS20-DGGE.

The easy-to-use pump head design accomodates several different silicon tubing sizes. This provides a great flexibility for a wide range of flow rates to be utilised when connecting with different sizes of tubings. Pump speed is adjustable up to maximum of 300 rpm, making it ideal for a wide range of applications, which include filtration, circulation, sampling, chemical spraying, dispensing, transferring, feeding and filling.

## personal thermal cycler

The PTC25 is designed with Hot Start PCR reactions in mind, with a wide range of programming features.

Flexible program editing, which allows researchers to set up an amplification program containing different temperature ramping conditions within individual loops allows efficient protocol development. The PTC25 also offers the flexibility to create an advanced amplification program which can increase/decrease temperatures and hold times for an assigned step from cycle to cycle. The cycler even features a RT program function, it's simple and convenient to run one-step RT by combining the RT program with a stored amplification reaction.

- Microprocessor control with digital
- Wide temperature control range and great temperature controlled performance
- LCD display
- Self pressure adjusting heating lid
- User friendly and powerful program performance
- RT program
- Link up to 5 loops for one program
- Up to 9 steps for each loop
- Up to 99 cycles for each program

TECHNICAL SPECIFICATION	ns
Sample Capacity	25 (5 x 5) x 0.2ml tube
Temperature Control Range	4°C to 110°C
Lid Temperature Control Range	ambient +5°C to 110°C
Block Homogeneity	20°C to 72°C < + 0.3°C
Control Accuracy	+0.2°C
Heating Rate	approx. 3°C /s
Cooling Rate	approx. 2°C /s
Display	2.6" LCD
Program	reverse transcription program
	link program: multi-loop available; up to 5
	step per Loop: up to 9
	cycle number: up to 99
	program storage: up to 100
	increment and decrement temperature per step on each cycle
Increment And Decrement Time Per Step On Each Cycle	yes
Rated Voltages	110 V / 220 V selectable
Unit Dimension (W x L x H)	200 x 320.5 x 190 mm
Unit Weight	approximately 18.9 lb (8.6 kg)
Stackable	Yes

# GTC96S thermal cycler

The GTC96S advanced thermal cycler delivers exceptional performance at an affordable price. A unique protocol optimisation process utilises Flexible Temperature technology to segregate the 96-well plate into six discrete (4×4-well) temperature zones, made easily distinguishable by blue and black squares.

Temperature selection is no longer automated and is entirely in the hands of the operator over a 24°C range, anywhere between 4 and 96°C. This enables the operator to optimise PCR by testing 6 different temperatures simultaneously in just one thermal cycler run. With heating and cooling rates of 5°C/s and 3.5°C/s respectively, the precision temperature control of the GTC96S minimises temperature overshooting and undershooting between individual stages within each PCR cycle, resulting in faster run times and greater efficiency.

Programming is both quick and simple through a large user-friendly interface, while pre-programmed methods make set-up obvious even to first time users. A heated lid, which is fully adjustable to apply optimal pressure to 0.2ml tubes and microplates, may be programmed to hold different temperatures between 60 to 65°C or 100 to 115°C.

#### Simplified Workflow – Improved Throughput GTC96 may be programmed to operate

may be programmed to operate between one and six different annealing temperatures of user choice, across the block.

- Improved Throughput by reducing time
- Simplified Workflow by reducing steps

Figure 1. Primers designed to anneal to various genes (e.g. Gene A. B. and C) typically have different annealing temperatures ( $T_1T_2$  and  $T_3$ ). To simplify workflow and increase throughput the GTC96 can perform up to six different reactions, significantly reducing steps and time

## KEY FEATURES

- Compatible with 96-well plates, 0.2ml tubes and tube strips
- Protocol optimization selectable from 1 to 24°C across the entire temperature control range from 4-99°C
- Precision temperature control increases both speed and efficiency

#### Intuitive User Interface GTC96 utilises an intuitive user interface. This user interface is friendly to the

This user interface is friendly to the laboratory environment. It can be used with lab gloves even if wet. The ramping speed and eliminated overshooting and undershooting which contributes to longer run times, have been improved.

TECHNICAL SPECIFICATIONS	
Sample Capacity	1x 96-well plate; 12x 8x0.2ml strip tubes; 96 x 0.2ml tubes
Programmable Temperature Range	4-99.9°C
Temperature Control	calculated or block
Temperature Accuracy / Uniformity	±0.5°C/±0.5°C
Heating / Cooling Method	Peltier
Maximum Heating / Cooling Rate	5°C / 3.5°C per second
Temperature Range of Segment Blocks	30-99°C; temperature of each 6-segment may be set independently
Maximum Temperature Difference Between 6-Segment Blocks	24°C
6-Segment Temperature Block Format	6 segments, each 4x4-well
Programmable Lid Temperature	60-65°C, 90-94°C
Memory	200 complete programmes
Temperature Increments / Decrements	yes
Time Increments / Decrements	yes

## **PCR** cabinets

These UV Sterilisation Cabinets provide a convenient area for setting up PCR reactions in a nucleic acid free environment thus limiting contamination.

Acting effectively as a low-cost alternative to a clean room, the powerful UV lights on each cabinet denature nucleic acids in 5 to 30 minutes making them unsuitable for amplification. The cabinets incorporate safety features to prevent user-exposure to UV light. The UV lights are timer controlled and there are safety switches on the cabinet doors which power off the UV lights when opened. The units' white light provides excellent visibility when working within the cabinet. Constructed from 10mm acrylic, the cabinets also act as efficient shields from beta radiation emissions and can therefore be safely used with isotopes such as <sup>32</sup>P.

Three models are available:- Maxi as shown above, a Mini cabinet on left for limited budget and bench space and a new Midi cabinet to save bench space without compromising on height. Safety SpillTrays and Liners of size 68 x 54cm, provide convenient containment of spillage (not included with cabinet).

## KEY FEATURES

- Inactivates nucleic acids in 5 to 30 minutes
- Doors fitted with safety switches
- Complete with four powerful, timer controlled UV bulbs
- Efficient decontamination of the complete work surface
- Suitable for work with <sup>32</sup>P

## **GloveBoxes**

Available ir exclusion non-read with ine herme dexte side the be and space A Co the full bulbs to 30 n work su

Available in four sizes, these glove boxes are for procedures requiring exclusion of atmospheric oxygen and moisture. Manufactured in robust non-reactive polycarbonate, Cleaver Scientific GloveBoxes can be used with inert gases such as helium, nitrogen and argon. Including hermetically-sealed gloves, for optimum user manoeuvrability and dexterity when handling equipment, samples and packages, and a side panel as standard, each box provides a safe barrier between the worker and any potential contaminant. GloveBoxes may also be supplied with airlocks, and are customisable in various shapes and sizes to suit different work environments, applications and spaces. Shelving and pipette holder options are also available. A CombiBox option combines the benefit of UV sterilisation with the fully sealed and enclosed area of a glove box. Four 15W UV-C bulbs with safety interlock switching may be timer controlled for up to 30 minutes, or indefinitely, to decontaminate equipment and the work surface, before and after use. A 15W white light bulb illuminates the entire work surface to provide excellent visibility.

- Available in 4 sizes, with or without air locks
- Provides a barrier between the user and potential contaminants
- Hermetically sealed gloves allow safe handling within a fully enclosed containment area
- Side panel allows samples and packages to be placed in and removed from the work area safely and easily

# teaching products

Cleaver Scientific offers a wide range of teaching equipment and kits, available in convenient packages as well as individually. We offer complete experimental set ups for classrooms to introduce our future young scientists to genotyping, genetics diseases, inherited traits and electrophoresis. Our teaching range includes:

Teaching specific gel tanks with enhanced safety features

Power supplies for running multiple experiments with simple interfaces

Story based DNA and Dye Electrophoresis kits for teaching the principles of electrophoresis and genetics

**General laboratory** equipment and reagents, everything you need to get a teaching lab running

For more information on the complete range of Cleaver Scientific teaching products, please refer to the website

# radiation safety

Available in standard 10mm beta-protecting acrylic, 12mm gamma-attenuating lead acrylic and also as duo shielding for protection against both types of emission, this comprehensive range of Radiation Safety Products comprises a large selection of shields, boxes, waste bins, trays, plus assorted accessories and cabinets.

#### **Shields**

Supplied in small, medium and large sizes and with curved base 15cm-deep for use with safety trays or flat 30x30cm base for under-the-bench protection. A range of angles offers increased manoeuvrability, while clear optical acrylic aids visualisation.

Cleaver Scientific cabinets provide a convenient area to carry out work with beta and gamma emitting isotopes with complete all round protection. Each cabinet's 49 x 55 x 37cm dimensions offer a large working area without impeding vision, either in a standing or seated position.

AND LINERS	-	
Available in general purpose, biohazard and radiation safety formats, spilltrays provide a re-usable work area with the added benefit of safe containment of spillages and lab bench protection. All trays supplied with one free liner when purchased. Additional environmentally friendly APET liners provided in packs of 25.

## AND WASTE BINS

Cleaver Scientific storage boxes are manufactured with hinged lids and accommodate interchangeable inserts that hold microtubes, centrifuge tubes, scintillation vials, universals, cryotubes and falcon tubes. Also supplied is our range of floor-standing and benchtop bins with anti-slip feet and hinged lids. These serve as an ideal solution for short-term storage of radioactive waste or radioisotopes. Both the Beta and Gamma storage bins are available in five sizes, while the two largest bin models have wheels for easy transportation. Optional heavy duty drawstring bags may also be purchased.

#### **Accessories**

Other accessories available include pipette guards, radiation tape and warning signs and labels.
